A Toolkit to Sustain Global & National Advocacy

Enabling Women to Track Global Fund Investments Towards Gender Equality Across HIV, Tuberculosis & Malaria

MARCH 2019
Acknowledgments

This Accountability Toolkit has been adapted from work conducted by the W4GF Global Coordinator (Sophie Dilmitis) whilst providing technical assistance (TA), through AIDS Strategy, Advocacy and Policy (ASAP) (Global Fund Preapproved Technical Assistance Provider), as a TA provider for the Global Fund Community Rights and Gender (CRG) Department. This work was to develop this Accountability Framework for the Zambia Youth Platform (ZYP) with support from the Global Fund CRG Strategic Initiative. This Accountability Toolkit was reviewed at different stages of its development by Dr. Alice Welbourn (Salamander Trust), Ms. Gabriella Prandini, GOAL Zimbabwe, Ms. Hilary Nkul (ASAP), Mr. Sibu Malambo (ZYP), Ms Luisa Orza, the International AIDS Alliance and key staff and representatives from the Global Fund CRG Department including: Ms Rukia Mankikko, Technical Advisor- Gender, Ms Uliane Appolinario Program Officer - Strategic Initiative, Ms. Rene Joy Bangert, Program and Data Coordinator (CRG); and Mr. Gavin Reid Technical Advisor on Community Responses and Systems as well as Dr Gemma Oberth providing support to the Global Fund’s CRG Department.

- **ToR**: Terms of Reference
- **TWP**: Technical Working Groups
- **UHC**: Universal Health Coverage
- **ZYP**: Zambia Youth Platform
- **W4GF**: Women4GlobalFund
Introduction

The Women4GlobalFund (W4GF) movement was founded in June 2013. It was created by a coalition of individuals and organisations concerned that gender equality was not receiving sufficient attention at the time of substantial transition within the Global Fund to Fight AIDS, Tuberculosis and Malaria (Global Fund). Today W4GF remains the only space for women in all their diversity focusing on the Global Fund and unites and mobilises women’s rights and gender equality activists to advance gender equality through Global Fund policies and processes at the global and national level in implementing countries.

The Global Fund is an essential partnership and funding mechanism that focuses on ending HIV, TB and malaria, in line with the Sustainable Development Goals (SDGs) and the principles of Universal Health Coverage (UHC). The Global Fund work is guided by its Global Fund Strategy (2017-2022) Investing to End Epidemics. It has no country offices or staff outside its headquarters in Geneva, Switzerland - nor does the Global Fund conduct any direct programming or service delivery. The Global Fund’s investments in countries are mostly implemented by Government bodies, such as Ministries of Health (MoH) and sometimes civil society implementers. The overall coordination of programs is guided by Country Coordinating Mechanisms (CCMs). CCMs are made up of different constituencies such as government officials, civil society and community-based organisations (CBOs), technical partners and people living and or affected by HIV, TB and malaria (the three diseases). These constituencies gather to discuss and decide which country priorities agreed in National Strategic Plans (NSPs) for each of the three diseases, should be included in the funding request to the Global Fund. Global Fund resources are not only guided by NSPs but can also be informed by existing national strategies and polices that address communities, gender, human rights and gender inequality, sexual and reproductive health and rights (SRHR).

The CCM overall responsibilities are to: coordinate the development of the national request for funding; nominate Principal Recipients (PRs); oversee the implementation of approved grants; approve reprogramming requests; and ensure linkages and consistency between Global Fund grants and other national health and development programs.

Given that the Global Fund, has no country presence, strategic partnerships and strong capacity of women are critical to ensure impact and investment that promotes and protects human rights and gender equality. This is the bedrock of effective programming. It is essential that women from diverse communities and constituencies are empowered and able to provide effective oversight of programs and their quality that are supported by the Global Fund, in a transparent and systematic manner as provided in this W4GF Accountability Toolkit.

This coordination:

- captures the lived realities and experiences of women and girls
- ensures services and interventions are working as intended
- ensures impact for women and AGYW in all their diversity in Global Fund implemented programmes
- contributes to shifting the status quo so that women, especially those on CCMs, are taken seriously as credible partners and not just seen as beneficiaries of programmes.
Through this Accountability Toolkit, W4GF will support women in all their diversity to review their own engagement in Global Fund processes and assess their effectiveness as advocates to influence national processes, and ensure countries move towards achieving gender equality and upholding human rights. This toolkit also enables W4GF advocates to conduct community-based monitoring (CBM) and shadow reporting (feedback) of Global Fund-supported programme implementation. This work helps to ensure that programmes and services are fit for purpose, responsive to the actual needs and realities of women and girls in all their diversity affected by the three diseases, and informs and supports global and national advocacy.¹

Women and AGYW in many countries engaged at national levels in country dialogues and some meaningfully participated in developing HIV, TB and malaria funding requests submitted to the Global Fund at various times through six submission windows. Window 1 through to Windows 6, resulted in a total of 225 funding requests submitted to the Global Fund and 198 approved by the Global Fund Board.² The meaningful engagement of women, AGYW, key and vulnerable populations and those living with HIV, and affected by TB and malaria is essential to creating effective programmes that work for women in all their diversity across HIV, TB and malaria.

Although W4GF has noted great improvement things are not yet ideal in most countries especially beyond the 13 priority³ countries able to access catalytic funding. The Technical Review Panel (TRP) reviews on Windows 1 & 2 still show a lack of gender equality and human rights prioritisation in funding requests. For many women, especially those from key populations and other under-serves, neglected and excluded groups including AGYW, the reality is that they continue to face barriers to meaningful participation.

As greater emphasis is being placed on grant implementation than in the past, W4GF advocates must be better supported to sustain advocacy through monitoring current implementation of grants. As women in implementing countries improve and amplify their advocacy it is important to critically assess and understand the overall landscape of what is being funded, where and by whom and where gaps remain. Whilst W4GF has made tremendous gains in ensuring that gender equality and human rights are a top-line strategic key objective of the Global Fund – it is also imperative that W4GF advocates maintain larger perspective of how the Global Fund fits into the ‘big picture’ funding landscape. This is especially important as some donor governments such as the United States of America (USA) are back peddling from previous efforts to safeguard fundamental rights of girls and women to decide freely and for themselves about their sexual lives, including whether, when, with whom and how many children they have.⁴ This works against achieving gender equality, achieving UHC and the SDGs.

¹ Specifically focused on Global Fund processes, technical partners and national decision makers and stakeholders

What is Community Based Monitoring and Feedback?

Community-based monitoring and feedback (CBMF) refers to a form of public oversight where communities, whether directly or indirectly, demand greater accountability from policy makers and providers in relation to the delivery of public services. Influencing programmes through review and CBMF empowers communities to:

- Engage in a reflection process about what is actually happening in their own communities
- Develop their knowledge, create awareness and ownership over future planning and finding solutions to the challenges they face
- Facilitate understanding of how change happens and causal effects – both positive and negative
- Ensure programmes and services remain relevant and on track – holding implementers accountable
- Collect and share qualitative data that seek to complement high-level global quantitative indicators and leverage these findings to influence initiatives and demand further alignment.

The description of CBM according to the Global Fund’s Modular Framework Handbook includes establishment of community-led mechanisms for ongoing monitoring of health policies, performance, quality of services, barriers to accessing services, inequalities (such as human rights violations, stigma and discrimination and gender-based inequalities). It could include:

- Scorecards
- Reporting from service users
- Community/service user meetings and assessment activities
- Setting up of complaint mechanisms
- Community reporting of feedback to relevant service providers/decision makers (e.g. collation of data, meetings, production of reports)
- Monitoring of individual cases for purposes of sharing with ombudsmen, for litigation, for research reports, and submission to UN human rights mechanisms, etc.

---

5 InScale Community Monitoring in a Volunteer Health Worker Setting: A Review of the Literature, March 2011 available here
The CCM’s oversight role is different from the PR’s responsibility to monitor and evaluate the implementation of grants. Oversight requires the CCM to understand how the grants are working, follow progress and challenges, and bottlenecks and follow up on actions for improving performance. Oversight is focused on governance and understanding whether or not the program is meeting its targets. The CCM is responsible for understanding grant implementation at the macro level, but does not need to immerse itself in the micro details, which is the responsibility of the PR.

In contrast, monitoring is the tracking of the key elements of program/project performance, usually inputs and outputs, through record-keeping, regular reporting and surveillance systems as well as health facility observation and surveys.” Monitoring is often more detailed than oversight and focuses on measuring adherence to targets. Oversight ensures that monitoring is being done, that results are being reported, and the program is meeting its targets.7 The CCM depends on implementation updates provided by the PRs on a quarterly basis during the Oversight Committee meetings and CCM meetings. The CCM also conducts oversight field visits, which are supposed to be conducted every six months.

Community-based research is essential for ensuring that policy-makers and programme planners are well informed as to: (1) the needs of the communities that their policies and programmes are aimed to reach; and (2) the real impact, availability, accessibility, affordability, acceptability, quality and effectiveness of the services and policies they currently are (or plan to be) delivering. Beyond informing others, community-based research is also an important source of information for communities to guide services, advocacy and actions. Moreover, community-based research empowers communities to play an active role in influencing policy dialogue.

When it comes to research led by communities, however, there is still insufficient funding, especially for research by marginalised communities. Where community-based and community-led research has been supported, it has resulted in crucial and insightful evidence for communities, policy-makers and programme planners. Communities Deliver: UNAIDS AND STOP AIDS ALLIANCE 2015

7 Global Fund Guidance Paper on CCM Oversight
This W4GF Accountability Toolkit aims to complement and strengthen the work of the CCM Oversight Committee by supporting women to engage with CBMF to inform CCM and implementing partners about the quality of their interventions. A glance of the overall seven (7) phases and sixteen (16) steps of the Accountability Toolkit are in the Figure below.
What is this Accountability Toolkit?

This W4GF Accountability Toolkit is for women and gender equality champions who engaged in the funding request process and advocated for specific human rights-based programmes and services for women and AGYW. This W4GF Accountability Toolkit supports W4GF advocates to assess their own engagement thus far. It enables W4GF advocates to remain engaged in the implementation and monitor that the funds they advocate for are reaching the right communities and benefitting women and AGYW. This Accountability Toolkit outlines a process for CBMF specially led by women.

CBM can be categorised into four models:

- Downward accountability (e.g. complaint-handling systems)
- Citizens as Service Delivery Watchdogs (e.g. reporting stock-outs of essential drugs)
- Local Health Governance Mechanisms (e.g. Local Health Councils)
- Social Audit (e.g. comprehensive approach, incorporating a variety of tools and processes)

Building accountability requires more than just tools and technical skills and should be seen as part of existing advocacy work. “Social accountability is 80% political and 20% technical. Methods and tools are important, but success depends on the context in which the tools are used, the principles and values that guide their use, and who is involved. Social accountability is as much about changing mentalities, building relationships, and developing capacities as it is about technical tools”. Scaling up Social Accountability in World Bank Operations

---

8 “Four models of community-based monitoring: a review” by London School of Economics, University of Copenhagen, International HIV/AIDS Alliance and commissioned by the Community, Rights and Gender Department at the Global Fund to Fight AIDS, Tuberculosis and Malaria (2016)
This Accountability Toolkit focuses on a social audit and provides a comprehensive tool that enables women to remain engaged by building understanding and knowledge around:

- What is happening?
- Where is it happening?
- Who is responsible?
- Defining the minimum standards of good practice?
- How equitable, acceptable, accessible, appropriate and effective are programmes and services?
- What needs to change?
- What can women do about this and how can women hold those responsible to account? How can collaborative feedback mechanisms be created to hold implementers to account?

This Accountability Toolkit emphasises a spirit of community understanding and ownership of national programming. Unpacking personal perceptions and experience will contribute to better collaboration and partnership between women and program implementers, leading to a more inclusive model of country ownership of national programs. The purpose of this Accountability Toolkit is to gather mostly qualitative evidence (with support from the CCM and PRs) to inform implementers on the quality of programs, ensuring that interventions continue to be relevant and to support women’s leadership for advocacy, meaningful participation and accountability. It uses simple language and available techniques that support women in communities to monitor and feedback successes and challenges on program delivery implemented by Principle Recipients (PRs) and Sub Recipients (SRs), who report to the CCM on Global Fund interventions.

This W4GF Accountability Toolkit includes seven (7) phases with sixteen (16) steps that cover how women can strengthen their own strategy, effectiveness and engagement in CBMF around Global Fund supported programmes. This Accountability Toolkit focuses on Global Fund supported programmes but also acknowledges that the Global Fund does not exist in isolation and works as a gap donor to address a broader national framework that includes domestic and official development assistance (ODA). It supports women already engaged in Global Fund national processes, to collect qualitative rights-based, gender-responsive data to monitor programmes funded by the Global Fund’s in their country. This would support the quantitative data collected to measure progress around women and AGYW. This could compliment the indicators that currently only count numbers of people tested and treated but do not speak to the quality of services or the reality and needs of women throughout their lives.
This Accountability Toolkit is a community driven tool that supports women to:

- **Assess their own engagement and effectiveness** as advocates in national processes that respond to HIV, TB and malaria. This includes their engagement during the funding request development as well as during the Technical Review Panel (TRP) feedback discussions at the country level and during grant-making.

- **Remain meaningful engaged** throughout the entire grant cycle, especially during grant implementation. Engagement ensures country objectives are met by upholding the rights of women to access services and by ensuring that services remain responsive to women and grounded in reality.

- **Define priorities.** This Accountability Toolkit is not prescriptive but is rather a guideline that can be adapted. It does not decide which programmes or interventions women should monitor – nor does it define specific priorities or locations to be tracked.

- **Conduct independent, bottom-up, community-led monitoring** that goes beyond counting numbers to track effectiveness of services and client perspectives highlighting lived realities. This work also includes empowering women in communities and leaving them with more information and linkages to services than before the CBM took place.

- **Build strategic partnerships** through informing implementers and strengthen partnerships between community and those implementing the grants. This will lead to better quality programmes and services.

- **Influence future Global Fund grants** through CBMF of programmes/services. Women, who are often beneficiaries of services, are also designers, managers, implementers and monitors of programs and can highlight what is and is not working well to influence reprogramming and advocate to scale up effective programmes and services. Women also need to be able to make the case for programmes and services that are working and must continue in the next funding cycle.

Some of the Phases and Steps in the W4GF Accountability Toolkit have been adapted from the Translating Community Research Into Global Policy Reform For National Action: A Checklist For Community Engagement To Implement The WHO Consolidated Guideline On The Sexual and Reproductive Health And Rights Of Women Living With HIV. This Accountability Toolkit has also leveraged existing tools and Frameworks that seek to support CBMF and engagement such as the Action Linking Interventions on VAW and HIV Everywhere (ALIV[H]E) Framework.

Social accountability can be defined as an approach towards building accountability that relies on civic engagement, i.e., in which it is ordinary citizens and/or civil society organizations who participate directly or indirectly in exacting accountability (World Bank, 2004).

For social accountability to become a reality, the World Bank believes that two obstacles must be overcome: 1) people need to understand themselves as rights holders and 2) they need to take collective actions based on information to demand accountability. This way, social accountability can improve service delivery, especially for the poor (World Bank, 2004).

The W4GF Accountability Toolkit further highlights the need for women in communities to be fully supported to engage and have the capacity to act upon their role as rights holders. They need to be supported to be able to take collective decisions and hold accountable the CCM and key implementers of Global Fund supported resources.

---

9 This was based on the UNAIDS 2014 Gender Assessment Tool: Towards a gender-transformative HIV response and the UNAIDS and STOP TB PARTNERSHIP Gender assessment tool for national HIV and TB responses: Towards gender - transformative HIV and TB responses.

10 Scaling up Social Accountability in World Bank Operations
Why is this Accountability Toolkit Important?

The ‘right to health’ is an important component of a human rights approach to HIV, TB and malaria. The right to health includes the right to health care, which embraces a wide range of socio-economic, political, legal, cultural and environmental factors that promote conditions in which people can lead a healthy life. The right to health extends to the underlying determinants of health, such as food and nutrition, housing, access to safe and potable water and adequate sanitation, safe and healthy working conditions, and a safe and healthy environment. The right to health includes the right to sexual and reproductive health services, access to non-judgmental, and confidential information and choice, as well as the resources necessary to act on that information. All of this is essential to women and especially AGYW.

However, the reality is that often health care systems often do not focus on achieving the highest attainable standard of health for all people (for many reasons). This is because their focus is on public health and on community-level outcomes. As a result, there is often a tension between public health on the one hand and human rights on the other, even though they are mutually compatible. At community level, civil society often feel caught in the middle. However, as Gruskin and Ferguson (2009, WHO Bull)\(^\text{11}\) make clear, this is both possible and essential. It is a human right to participate and express views, needs and experiences and to make sure that public funds are spent correctly and transparently, intervening where necessary and if quality of care principles are not respected. This Toolkit recognises that women who access and benefit from services and programmes need support to respond as active holders of human rights and not only passive users of public services.

In line with the WHO quality of care\(^\text{12}\) Framework duty bearers are required to provide programmes and services that meet the minimum standard of care. This includes programmes and services that are equitable, acceptable, accessible, appropriate and effective. In order to ensure minimum standards, duty bearers must meaningfully engage women, especially those most vulnerable and marginalised, from the very outset in programme design, implementation, monitoring and evaluation.

\(^{11}\) *Using indicators to determine the contribution of human rights to public health efforts*

\(^{12}\) *WHO, 2012: Making health services adolescent friendly: Developing national quality standards for adolescent-friendly health services. Quality Assessment Guidebook*
The UNAIDS agenda for zero discrimination in health care settings minimum services for discrimination-free health care settings include the following:

01. THE HEALTH-CARE CENTRE SHOULD PROVIDE TIMELY AND QUALITY HEALTH CARE TO ALL PEOPLE IN NEED, REGARDLESS OF GENDER, NATIONALITY, AGE, DISABILITY, ETHNIC ORIGIN, SEXUAL ORIENTATION, RELIGION, LANGUAGE, SOCIOECONOMIC STATUS, HIV OR OTHER HEALTH STATUS, OR ANY OTHER GROUNDS.

02. INFORMED CONSENT IS REQUESTED FROM THE PATIENT BEFORE ANY TESTS ARE CARRIED OUT OR ANY TREATMENT IS PRESCRIBED. FURTHERMORE, PATIENTS ARE NOT FORCED TO TAKE UP OR REQUEST ANY SERVICES.

03. HEALTH-CARE PROVIDERS RESPECT THE PATIENT’S PRIVACY AND CONFIDENTIALITY AT ALL TIMES.

04. HEALTH-CARE PROVIDERS ARE REGULARLY TRAINED AND HAVE SUFFICIENT CAPACITIES AND COMPETENCIES TO PROVIDE SERVICES FREE FROM STIGMA AND DISCRIMINATION.

05. THE HEALTH-CARE CENTRE HAS MECHANISMS IN PLACE TO REDRESS EPISODES OF DISCRIMINATION AND VIOLATION OF THE RIGHTS OF ITS CLIENTS AND ENSURE ACCOUNTABILITY.

06. THE HEALTH-CARE CENTRE ENSURES THE PARTICIPATION OF AFFECTED COMMUNITIES IN THE DEVELOPMENT OF POLICIES AND PROGRAMMES PROMOTING EQUALITY AND NON-DISCRIMINATION IN HEALTH CARE.
Community-Based Monitoring: Key Principles

Communities gathered together recently (convened by the Global Fund Secretariat) and defined key principles which are essential for CBMF to be successful. These included:

- **Independence**: effective community monitoring initiatives are independent of the services and programmes being monitored
- **Accountability, transparency and feedback**: programmes and service providers can enable community feedback by making performance data available and by creating confidential feedback mechanisms
- **Community led and focused**: communities will monitor issues that they most care about, not abstract indicators
- **Monitoring is not just about big data and policy change**: results of community monitoring should first and foremost inform local feedback, action and change
- **Effective monitoring emerges from community engagement and mobilisation**: it is not enough to simply set up and fund monitoring initiatives from the outside
- **Monitoring should enable action**: communities engage when their efforts lead to real action and change
- **Credibility of data**: monitoring approaches should be credible and verifiable
- **Beyond programmes**: communities are interested in improvements in the whole environment in which they live, not just in particular programmes
- **Trust and security**: communities may be taking risks when monitoring issues around service quality and human rights; service providers and funders should address and mitigate this
- **Evolving and adapting**: effective community monitoring evolves to address emerging issues and adapts to new concerns and changes in context; many initiatives have moved from being disease specific to being about health more generally.

---

Key Principles around Community Based Monitoring
How to use the W4GF Accountability Toolkit

The W4GF Accountability Toolkit includes seven (7) phases with sixteen (16) steps that cover key areas where women can strengthen their own strategy and effectiveness and engage in CBMF. All of the steps are further supported by Annexes A-O that expand on the key concepts that are essential in the Accountability Toolkit.

<td>The outputs, outcomes, or impacts (intended or unintended, positive and/or negative) of an intervention</td>
</tr>
<tr>
<td><strong>Outcome</strong></td>
<td>What has happened or been achieved because of the work done</td>
</tr>
<tr>
<td><strong>Indicator</strong></td>
<td>A quantitative or qualitative variable that provides a valid and reliable way to measure achievement, assess performance, or reflect changes connected to an intervention.</td>
</tr>
</tbody>
</table>

Note: Single indicators are limited in their utility for understanding program effects (i.e., what is working or is not working, and why?). Indicator data should be collected and interpreted as part of a set of indicators. Indicator sets alone cannot determine the effectiveness of a program or collection of programs; for this, good evaluation designs are necessary. *UNAIDS Glossary of terms Monitoring and Evaluation Terms*

</tr>
<tr>
<td><strong>SPICED Indicator</strong></td>
<td>Indicators that are: Subjective, Participatory, Interpreted, Cross-checked, Empowering, Diverse and Disaggregated. Indicators originating from a women perspective should be SPICED (Subjective, Participatory, Interpreted, Cross-checked, Empowering, Diverse and Disaggregated). SPICED indicators are often closer to the priorities and desires of people than SMART (Specific, Measurable, Attainable, Realistic and Time-bound) indicators, which, despite good intent, have a limited understanding of any qualitative key issues. SPICED indicators can be developed to become SMART, but SMART indicators, developed externally are rarely automatically SPICED. Hence the need to work with women to develop their own indicators to track the changes they wish to see.</td>

*ALIV/HJE Framework 2017 Page 83*
Understanding quantitative and qualitative research

- **Quantitative data** collection (used by countries reporting to the Global Fund) is designed to collect cold, hard facts and numbers. The Global Fund encourages countries to always desegregate data by age and sex. Quantitative data are structured and statistical. Quantitative data speaks to the “what” and counts numbers of people for example how many people are accessing services and treatment. Quantitative data helps to draw general conclusions about the work.

- **Qualitative data** collection provides information that seeks to describe a topic (why, how) more than measure it. Think of impressions, opinions, and views. Qualitative data seek to delve deep into the topic at hand, to gain information about people’s motivations, thinking, and attitudes. While this brings depth of understanding to your research questions, it will also take longer for the results to be analysed.\(^\text{13}\)

The W4GF Accountability Toolkit emphasises the importance of both quantitative and qualitative, formal and participatory approaches and indicators (explained below), which complement each other and provide a comprehensive picture of impact. This Accountability Toolkit focuses on qualitative participatory methodologies, which can be utilised by women to strengthen global quantitative indicators, on which countries are required to report. Qualitative participatory research can put a human voice to the numbers and trends that quantitative data capture.

These data can help implementers to fully understand how women and AGYW are receiving the service and what difference it is making in their lives. They can highlight weaknesses or deficiencies where programmes and services require strengthening and they also provide evidence of what is working well and should be scaled up, from a community perspective. In this way PRs and SRs can create and develop relevant accessible services, which will fit people rather than trying to squeeze women and AGYW into standardised, top-down services. Whilst the process may take longer initially, the longer-term investment will pay dividends in terms of program effectiveness.

\(^\text{13}\) The Difference Between Quantitative vs. Qualitative Research
The W4GF Accountability Toolkit places more emphasis on qualitative ways to collect data but also highlights below the various ways in which communities can engage with the four major approaches to measuring results:

- **Formal–quantitative**: This approach produces numbers (e.g. 37% of women have ever experienced violence from a partner) through externally designed approaches, such as questionnaires.
- **Participatory–quantitative**: This approach also produces numbers but ensures that participants’ voices are incorporated into the assessment.
- **Formal–qualitative**: A qualitative approach creates information through discussion or interviews either with an individual or in groups. It helps us to understand the process of change in the context of people’s lives.
- **Participatory–qualitative**: This includes techniques, such as mapping and drawing, to produce different forms of data. The process is guided more by the participants than by outside researchers.

---

14 ALIV[H]E Framework Action Linking Initiatives on Violence Against Women and HIV Page 55
The Global Fund requests that countries use quantitative indicators for HIV, TB and malaria. These include impact, outcome and coverage indicators that are included in the Global Fund Modular Framework Handbook.

The current global indicators are high-level indicators and none of them speak to quality of services but only focus on percentages of people reached (quantities).

Some of the indicators that specifically mention women in the Modular Framework include:

- Estimated percentage of child HIV infections from HIV-positive women delivering in the past 12 months
- Percentage of women and men with non-regular partner in the past 12 months who report the use of a condom during their last intercourse
- Proportion of ever-married or partnered women aged 15-49 who experienced physical or sexual violence from a male intimate partner in the past 12 months
- Percentage of women and men aged 15–49 who report discriminatory attitudes towards people living with HIV
- Percentage of AGYW reached with HIV prevention programs- defined package of services
- Number of AGYW who were tested for HIV and received their results during the reporting period
- Percentage of AGYW using pre-exposure Prophylaxis
- Percentage of pregnant women who know their HIV status
- Percentage of HIV-positive pregnant women who received antiretroviral therapy during pregnancy
- Proportion of pregnant women who slept under an insecticide-treated net the previous night
- Proportion of pregnant women attending antenatal clinics who received three or more doses of intermittent preventive treatment for malaria

This Accountability Toolkit recognises the need for women to develop their own indicators of success based on the WHO quality of care and the UNAIDS minimum standards mentioned in section 5. See more on this in Accountability Toolkit Step 11.
Accountability Toolkit Phases & Steps

**Phase 1: Reflection and Assessing Engagement**
Step 1: Bring together women, AGYW and gender equality advocates who engaged in the funding request development for a one-day reflection meeting.
Step 2: Assess strategy, engagement and effectiveness as advocates during:
1. The funding request development;
2. Technical Review Panel (TRP) feedback discussions; &
3. Grant-making.
Step 3: Document lessons learnt and advocacy.

**Phase 2: Inception and Planning**
Step 4: Build support amongst women and secure high-level commitment from the CCM and PRs.
Step 5: Develop a resource plan.
Step 6: Secure a lead organiser to support the process.
Step 7: Know your national response and obtain full information on what the Global Fund is supporting and who is implementing what and where.
Step 8: Define general locations and services where CBM will be conducted.

**Phase 3: The Workshop Training**
Step 9: Organise a workshop.
Step 10: Identify workshop participants from the districts that CBM will take place.
Step 11: Conduct the workshop to prepare the team with an action plan and methodologies as a workshop outcome.

**Phase 4: Conduct Community Based Monitoring**
Step 12: Track and monitor progress of Global Fund funded programmes.

**Phase 5: Data Analysis**
Step 13: Analyse the data collected and document findings.
Step 14: Share the draft report with the coalition.
Step 15: Finalise findings to identify priority initiatives for advocacy.

**Phase 6: Findings into Advocacy**
Step 16: Develop an advocacy and communication plan.

**Phase 7: Sharing Outcomes and Continue to Monitor the Changes Made**
PHASE 1 – REFLECTION AND ASSESSING ENGAGEMENT

Step 1: Bring together women in all their diversity

- Send out an invitation to all women; AGYW and gender equality advocates who engaged in the funding request development for a one-day reflection meeting with the objective to reflect and assess their engagement as advocates.
- Also invite any women from different constituencies that should have been there but were absent or not included.

Step 2: Assess strategy, engagement and effectiveness as advocates

- Identify two people: someone who is well respected and able to lead these discussions and another person with excellent writing skills to take notes and document the discussion.
- During this meeting facilitate a discussion to understand how effective the strategy and engagement of women was in the following processes: 1) the funding request development; 2) Technical Review Panel (TRP) feedback discussions; & 3) grant-making – See Annex B for the Phase 1 facilitation discussion guide.

Step 3: Document lessons learnt and advocacy

PHASE 2 - INCEPTION & PLANNING

Step 4: Build support amongst women and secure high-level commitment from the CCM and PRs

- Reach out to the same organisations and networks of women and AGYW who engaged in Phase 1 discussions and include any others that were missing. Gauge their interest in CBMF. At this point, invite only allies who will definitely support CBMF to discuss this initiative and gather a group interested to conduct CBMF of programmes and services supported by the Global Fund and other key partners.

When convening this initial meeting be sure to invite a diverse group, to include a balanced range of women: ages, living with HIV, and affected by TB and malaria; regions, sexual orientation and gender identity (SOGI), people who use drugs, people with disability, sex workers, ethnic groups, and people from urban/rural areas. In addition to community diversity include people with expertise, (perhaps from outside the community, e.g. community workers, academics or research professionals) who can strengthen credibility and support this work. Also invite any gender or Adolescent Health (ADH) Technical Working Group (TWG) if this is important in your country.

- At this meeting do the following:
  - Introduce CBMF and explain why it is essential.

A community partnership is a collaboration that represents the most intense way for individuals to work together, while still retaining the separate identity of the participating entities. Once you have identified your stakeholders, you need to discuss with them the possibility of collaborating in the community public health assessment and becoming a community partner. You should consider ahead of time what levels of collaboration you are prepared to offer and accept from these stakeholders. Some may want to only be updated with progress, some may wish to provide occasional consultation or feedback, and others may wish to be included in all aspects of the work involved. UCLA Performing a Community Assessment
• Seek agreement that partners are interested to engage in this work.
• Conduct a quick stakeholder analysis to identify relevant players who are essential but not in the room. This could also be linked to areas and locations where services exist (supported by the Global Fund) that are to be monitored and tracked. Also consider as part of this analysis those who might support or oppose this work?
• Agree on a name for this group (for the purposes of this Toolkit ‘The Accountability Toolkit Implementation Group (TIG)’).
• See who is interested in being the lead organisation/network (for purposes of the Toolkit we will refer to ‘The Lead’ to coordinate the work of The Accountability Toolkit Implementation Group and agree lines of reporting. If the person/organisation who called this meeting is interested to assume this role – make this known now.
• Discuss resources as essential to engage in this work. Gauge support from partners at this meeting and who else might be able to provide resources.

• Straight after this initial meeting and once you know who is interested to engage in this work – organise the second meeting. This is to inform the CCM, PRs and SRs and key partners and seek their support and collaboration. Be sure to include the National AIDS Council (NAC) as a member of the CCM. Invite them to all to this meeting to get their direct buy in and commitment for support going forward. Present CBMF to them and find ways that this can be done together. You will need their support moving forward. See Annex C - a sample letter requesting engagement and support from key partners, including the CCM, PRs and SRs who are implementing the programmes/services that you may wish to monitor.

Step 5: Develop a resource plan

• Have an initial discussion with the Accountability TIG about where you think you want to conduct CBMF. It is advisable to start in one district and then integrate any learning before more work is done in another district. All you need now is to know the location and what the programme/service is, confirm it is for women or AGYW and who is implementing it.
• Prepare an initial budget that highlights the key stages of the W4GF Accountability Toolkit. List and agree the human resources required to conduct CBMF and agree the costs associated with respective responsibilities in the process. The budget should include the following requirements:
  o The Accountability TIG coordination expenditures
  o Additional human resources such as consultants who might need to support the work
  o Meetings and workshops (including lodging, travel and logistic costs, as needed)
  o Costing around conducting the CBMF
  o Costing to review the data and develop advocacy material; and
  o Other costs, as relevant to the national context.
• Reach out to partners that have indicated their interest from the initial meeting and confirm the availability of funds to support CBMF. Start to explore which partners might be interested to support this work and prepare a concept note that covers all the areas requiring funding. Use this to mobilise resources from prospective donors and or technical agencies – Use all available contacts to build support for this initiative. See Annex D - a Sample Resource Planning Tool.
Step 6: Secure a lead organiser to support this process

- The Lead may be the individual or network/organisation that called the initial meeting, but not necessarily. See Annex E – A sample ToR for the Lead organisation/network.

- Once funding has been secured, The Lead will facilitate this CBM process to guarantee adequate ownership and coordination and ensure relevant stakeholders are engaged in the entire process, beyond the W4GF Accountability TIG.

- The Lead network/organisation must be committed to conducting the following tasks:
  - Agree on roles and responsibilities and ways of working and communication with the W4GF Accountability TIG and lines of reporting back to the W4GF Secretariat who will support advocacy efforts
  - Define a clear, feasible and achievable timeline to prepare and undertake the rest of the process outlined here, including milestones and deadlines. Deadlines should be influenced by relevant national processes and opportunities where findings can be leveraged, to lobby for action and support (e.g. CCM oversight meetings and CCM meeting including reporting timelines to the Global Fund), if relevant.
  - Support and coordinate the work of the W4GF Accountability TIG
  - Review suggested materials and decide methodologies to be used in monitoring and tracking programmes and services supported by the Global Fund
  - Coordinate and report data findings through effective advocacy on behalf of the W4GF Accountability TIG
  - Maintain relationships with all partners especially the CCM and PRs and participate in national platforms and consult and debrief all Accountability TIG Members
  - Coordinate meetings with key stakeholders and build support
  - Conduct virtual meetings and maintain online social media platforms.

Step 7: Know your national response and obtain full information on what the Global Fund is supporting and who is implementing what and where

- Assess and MAKE A NOTE of how available, accessible and public the relevant information, data and documentation are from the CCM and also from the Global Fund Secretariat. This includes:
  - The final funding request submitted to the Global Fund Secretariat
  - The matching funds application (if applicable)
  - The grant agreement
  - The performance frameworks and budgets
  - Any presentations that the CCM has prepared as it finalises implementation arrangements.

For example, are all these documents available on the Internet? They should be available on the Global Fund website here. The Accountability Toolkit Implementation Group requires this level of information to fully understand what the country is working towards, who the PRs, and SRs are. Building relationships with the CCM and PRs and SRs will be a crucial part of this work.

- MAKE A NOTE of how easy it is to understand the documentation, if you are able to obtain these and any reports and data from the CCM, PRs and SRs. Being able to understand technical language is a prerequisite to enable meaningful participation in decision-making, as well as to be able to hold those who deliver public services accountable. If the documents are not clear then you need to point this out to those who have created the documents to seek clarity and request that technical language
and terms not become a barrier to participation. In some countries it is a requirement for health providers to write clearly to ensure that all people understand.\textsuperscript{15}

- Fully understand the national context. This would include fully understanding the NSP and how women were involved in its development as well as how it prioritises and speaks to the needs and rights of women, and AGYW. This could also include reviewing the latest epi information any studies done with and for women across the three diseases. What thematic areas are being supported by the Global Fund and what are other key donors (for example PEPFAR) supporting?

- It is important to build a clear picture of the Global Fund’s share of resource allocation in the country. Seek clarity on the following:
  - What programmes are being supported by the Global Fund?
  - Where are these programmes and services located?
  - Who is responsible for implementation?
  - What methods of M&E (monitoring and evaluation) are PRs and SRs using? And what qualitative methods exist or are planned by PRs and SRs?
  - When are oversight visits planned? Who is on the oversight committee that might be allies to this process.

- Understand CCM oversight role and management of programmes. Review any civil society shadow reports. What has changed since this CCM evaluation took place, to determine how the CCM is performing in line with the Global Fund’s own Eligibility Performance Assessment? This is also a means to improve accountability.

**STEP 8: Define locations and services where CBMF will be conducted and start to think through the components of CBMF**

Based on a clear picture of the country context, reassess your initial decision and decide where to conduct this first pilot CBMF process. See Annex F - Tracking Indicators, Approach, Capacity and Methodology.

When considering the work, regardless of what you are monitoring the CBMF components of how you do the work remain the same. It is important to think about the following components:

- What is the ideal health service that addresses the priority needs of women and/or AGYW and includes their well-being – how would you measure this in line with the WHO principles: Equitable; Accessible; Acceptable; Appropriate and Effective
- How does this health service align or relate to WHO or national guidelines and evidence-based best practice?
- What the perception and/or assumptions of the current service?
- What are the indicators that they are reporting on? (this is helpful to know but not essential) The global high-level indicator for this would be: \textit{Percentage of adolescent girls and young women reached with HIV prevention programs - defined package of services}\textsuperscript{15}

\textsuperscript{15} This is a requirement, for example, of health workers in the UK
If this was your ideal programme - what might your own indicators of success look like if these were more SPICED? As a reminder on SPICED Indicators - see the box below.

Define the objectives for this CBMF.

| Subjective: key informants (beneficiaries/stakeholders) have a special position or experience that gives them unique insights which may yield high return time-wise. What may be seen by some as 'anecdotal evidence' becomes critical data because of the source's value |
| Participatory: indicators should be developed together with those best placed to assess them, i.e. with the project's ultimate beneficiaries, local staff and other stakeholders |
| Interpreted and communicable: locally defined indicators may not mean much to others, which means they need to be explained or interpreted to different stakeholders |
| Cross-checked and compared: the validity of indicators needs to be cross-checked by comparing different indicators and progress, and by using different stakeholders and methods to ensure validity |
| Empowering: the process to develop and assess indicators should be empowering in itself and should allow stakeholders to reflect critically on their changing situation |
| Diverse and disaggregated: there should be a deliberate effort to seek out different indicators from a range of groups and across gender. The data needs to be recorded in a way that these differences can be assessed over time. |

For example, some countries may choose to focus on Comprehensive Sexuality Education (CSE) with young people in schools. Go through the process and answer the questions as per this example below. According to the UNFPA Operational Guidance, there are nine essential components of CSE, which have been integrated into this chart below. These indicators on the extreme left (are ideal) and help us to think through programmes that are equitable; accessible; acceptable; appropriate; and effective). The positive and negative perceptions and assumptions helps up to think through what we might find, and it is also important to understand what the objectives of all of this are?

<table>
<thead>
<tr>
<th>IDEAL</th>
<th>Positive perceptions &amp; assumptions</th>
<th>Negative perceptions &amp; assumptions</th>
<th>What are the CBMF objectives</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equitable: Young people in all their diversity have opportunity to CSE in schools</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Reaching across formal and informal sectors and across age groupings</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Sessions address different populations of young people including key populations</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>This is an open and frank discussion where full information on sex and sexuality is provided - All questions asked are answered honestly</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Integrated focus on gender</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>The discussion is not open and honest, and the only prevention method discussed is abstinence</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>The facilitator is not comfortable talking about sex and sexuality or gender and power and does not answer all questions asked</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>The sessions do not touch on SOGI</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>To assess if everyone has been able to participate in CSE sessions in schools</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>To assess the quality and content of what has been provided and if it is for all young people in their diversity.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Accessible: All young people are able to access CSE</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>A safe and healthy learning environment</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Safe spaces for girls to express themselves freely.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>This happens at a time when not all students are around and when it does happen they do not feel safe</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>To assess if an enabling environment was created</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
**Acceptable:**
Young people feel that the CSE is valuable to their own lives

- Grounded in core universal values of human rights
  - The space and information are used to discuss challenging issues around SOGI and reproduction as well as really unpacking gender and power and relationships between the two
  - Discussions provide incorrect information on SOGI and gender and conversations that challenge SOGI and harmful gender norms are prevented and not allowed.

<table>
<thead>
<tr>
<th>To understand how young people, view this?</th>
</tr>
</thead>
<tbody>
<tr>
<td>What could be done better?</td>
</tr>
<tr>
<td>What is working well?</td>
</tr>
</tbody>
</table>

**Appropriate:**
Health services are grounded in respecting privacy, confidentiality, non-stigmatisation, and gender-responsiveness

- Youth friendly services — so all staff from desk clerk to clinicians are trained on what that means.
  - Thorough and scientifically accurate information
  - Participatory teaching methods for personalisation of information and strengthened skills in communication, decision-making and critical thinking.
  - Easily digestible information.
  - Cultural relevance in tackling human rights violations and gender inequality including GBV.

<table>
<thead>
<tr>
<th>To assess the content?</th>
</tr>
</thead>
<tbody>
<tr>
<td>To assess the methodology used?</td>
</tr>
<tr>
<td>To understand how the content speaks to human rights and gender equality</td>
</tr>
</tbody>
</table>

**Effective:**
Having a positive contribution to the health of adolescents — fewer teenage pregnancies and lower HIV prevalence

- Linking to sexual and reproductive health services and other initiatives that address gender equality, empowerment, social and economic assets for young people
  - Young people are taking up offers of different contraceptives options, including condoms
  - Young people are accessing additional information/lifesaving tools/support if this is required
  - Strengthening youth advocacy and civic engagement

<table>
<thead>
<tr>
<th>What value does this add and how do young people perceive the CSE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Are young people happy with the prevention options and are these always accessible</td>
</tr>
</tbody>
</table>

The table below shows the indicators from high-level global indicators and then moving from SMART to SPICED indicators.

**IMPORTANT:** indicators can change over time and need to be reviewed regularly. For instance, community members may begin with just wanting to have basic access to health services. Later, they may want to change that to access to good services; and, later still, access to and regular uptake of good services, with reductions in unintended pregnancies, STIs etc. As the program develops, so also should the quality and reach of the outcome progress.

<table>
<thead>
<tr>
<th>Global Indicators</th>
<th>SMART Indicators to address this</th>
<th>SPICED Indicators</th>
</tr>
</thead>
<tbody>
<tr>
<td>Percentage of adolescent girls and young women reached with HIV prevention programs</td>
<td>School management has a policy on the SRHR of pupils and they are able to address challenges if students need additional support</td>
<td>Young people were part of developing the school policy on SRHR and understand it and feel safe enough to</td>
</tr>
</tbody>
</table>

---

First Edition – March 2019 26
HIV prevalence among adolescent girls and boys (15-19) and young women and men (20-24) | Young people in school understand their SRHR and are able to access HIV related services and treatment | E.g. young people know their own HIV status and feel comfortable sharing it, if they want to, with others around them
---|---|---
Maternal mortality ratio among 15-24-year-old females | The school provides services and young people have access to support and information they require | Young pregnant women are well and can stay in school with access to support including cash transfers
Proportion of all women aged 15-19 and 20-24 who agree that a husband is justified in beating his wife for specific reasons | Increased numbers of young people accessing SRHR services in the community and school in year 1,2,3 | Both young women and young men are clear that intimate partner violence is a human rights abuse and actively support one another to develop and uphold mutually respectful relationships
Percentage of women whose age at marriage is below 15 and 18 years | Numbers of schools that allow CSE peer education in their school | 

- Decide which approach will be used to conduct CBMF? These might include:
  - Community Mappings – See Annex G
  - Key Informant Interviews (KII): These are One-on-one conversations (either in person or by phone) that deeply explore the issue – See Annex H
  - Focus Groups: In-person conversations with small groups of people to engage and understand their views – See Annex I
  - Surveys
  - Community Forums
  - Community Score Cards
  - Case studies: Collections of client stories from in-depth interviews
  - Expert opinions: High-quality information from well-informed sources
- Do you have the capacity to do this? (Skills, human and financial resources)
- How will you implement this (Who will do the work? What are the activities? Where will it happen? And When?) Revert back to Annex F, which can be used to track indicators, approach, capacity and methodology.

**Phase 3 – THE WORKSHOP TRAINING**

**STEP 9: Organise a training workshop**

The workshop should take place over four days, as a residential workshop. It would be ideal to select people who have a fair understanding of how the CCM works and who have been engaged at the national level. See Annex J - A sample workshop agenda (for those who are not aware of the Global Fund. Workshop objectives could include to:

- Build understanding of current grant, the CCM, PRs, SRs, the allocations and implementation arrangements etc as well as understanding the strategic entry points to influence ... whom/what?
- Amplify the voices of women to influence health programs, particularly those supported by the Global Fund
- Learn to implement the W4GF Accountability Toolkit to monitor and feedback successes and challenges related to services delivered under the Global Fund
investments, from the district to the national level

- Strengthen the W4GF Accountability Toolkit Implementation Group community-led coordination and CBMF efforts.

**STEP 10: Identify workshop participants from the districts that CBMF will take place**

Workshop participants will be drawn from the pool of women who will actively conduct or (in an active way) support those conducting the CBMF. All these women must be able to

- Be women who represent women in all their diversity – including women from key populations, women with disabilities, women who use drugs, women who engage in sex work and lesbian and transgender women
- Demonstrate ties to the CCM and national networks engaged in national Global Fund processes working to address HIV, TB or malaria
- Prove affiliation to networks or organisations of women living with HIV; and women’s/human rights groups; young women; networks of TB and malaria who are willing to support this work
- Experience in implementing/reviewing/assessing community-based health care programmes (preferably TB, HIV and/or malaria) and have a keen interest in CBMF of health services
- Be able to work in English and have access to internet (essential)
- Be proactive, and able to use the information and skills for relevant advocacy activities relating to HIV, TB and malaria.

It is important to guarantee that these women understand their role - representing diverse and key affected populations to monitor and track engagement and implemented programmes – contributing to meaningful involvement as a core principle of W4GF. This in turn will affirm the lived experiences and expertise of women in all their diversity and will help to develop ownership in the outcomes of this work.

**STEP 11: Conduct the workshop to prepare the team with an action plan**

This workshop will gather a core working group who will conduct CBMF in an agreed one or two pilot districts. The objective of the workshop will be to train those who will be conducting the CBMF in their own communities. At the workshop:

- Make sure all group training work is done in teams geographically located where the work will be conducted. If you are going to conduct this work in two districts, you will need all the group work to be done in those two districts.
- The workshop will solidify strategic initiatives to track and identify the CBMF components and methodology.

To start the workshop, the consultant will present an extensive overview of the current situation as a starting point for the discussions. The workshop could take on the following structure:

- Day 1: Increase understanding of national Global Fund processes as well as the strategic entry points. This also includes an overview of the current grant, the CCM; PRs, SRs, the allocations and implementation arrangements etc. Who is doing what where?
- Day 2: Understand how to use the Accountability Toolkit and starting to think through where this will happen and some of the key elements.
- Day 3: Continuation of day 2 – thinking through where, when, what and how and what CBMF techniques will be utilised.
- Day 4: Finalise workplans and agree ways to sustain CBMF efforts. This day includes
defining ways of work and agreeing where, when, what and how.

The workshop will create a solid understanding of the country context, by:

- Undertaking what the Global Fund and other key donors such as PEPFAR is supporting around the NSP.
- Identifying existing policy and programmatic gaps that limit the capacity of women and AGYW to enjoy their SRHR.
- Critiquing national policies, guidelines and programmes, identifying which support efforts toward gender equality and human rights for women in all their diversity.
- Assessing what is/isn’t working and what needs to change?

TAKE NOTE!

- Make sure the room has natural light and provides ample space
- Set up the tables so that people sit in smaller groups (Round tables of 10 works better than one large L shaped tables)
- Ensure there is enough wall space to displace the work
- You will need flipchart paper and markers
- Be prepared! Ensure that all papers are printed ahead of the workshop! Avoid printing at the last minute
- Start the four days with a dinner the night before to go through the workshop objectives and allow sufficient time for generous introductions so that these do not need to be done on day 1 of the workshop
- Make sure the facilitator is skilled in CBMF and facilitating participatory processes and is able to respect the times set out in the agenda.

PHASE 4 – CONDUCT COMMUNITY-BASED MONITORING

Step 12: Track and monitor Global Fund supported programmes

All four data collection methodologies are important and are complementary. This part of the Accountability Toolkit focuses on the four major groups of evaluation processes and provides ideas for how CBMF can be conducted. There is more focus on certain data collection methods that are more orientated to CBMF and evaluation and for people not working on the inside of services.

Some people believe participatory approaches should take place before any of the formal approaches as they give so much more insight into ‘why’ and ‘how’ and what local priorities are compared to external priorities…but many implementers using formal processes insist on conducting formal approaches, so as not to ‘bias’ the data.
This chart below highlights the various techniques that are applicable in this Accountability Toolkit

<table>
<thead>
<tr>
<th>Formal–qualitative</th>
<th>Formal–quantitative</th>
<th>Participatory–qualitative</th>
<th>Participatory–quantitative</th>
</tr>
</thead>
<tbody>
<tr>
<td>A qualitative approach creates information through discussion or interviews, either with an individual or in groups. It helps us to understand the process of change in the context of people’s lives.</td>
<td>This approach produces numbers (e.g. 37% of women have ever experienced violence from a partner) through externally designed approaches, such as questionnaires.</td>
<td>This includes techniques, such as mapping and drawing of issues defined by community members themselves, to produce data. This can be data either identified by them or data requested by outsiders. The process is most powerful when guided more by the participants than by outside researchers.</td>
<td>This approach produces numbers in relation to priorities relevant to community members. It ensures that participants’ voices and perspectives are incorporated into the quantitative assessment process.</td>
</tr>
</tbody>
</table>

**Ideally this should be conducted first, to ensure that formal quantitative questions are appropriate and relevant to community members.**

Conduct **Key Informant Interviews** (KIs) and or **In-Depth Interviews** (IDIs). These are qualitative in-depth interviews with people who know what is going on in the community. The interviews allow information to be collected from a wide range of people, including male and female community leaders, professionals, or residents, who have first-hand knowledge about the community. This provides insights on challenges and recommendations for solutions. (UCLA CENTER FOR HEALTH POLICY RESEARCH) For more on this click [here](#).

Take time to review and understand what else is out there in terms of formal-quantitative data.

This includes Population-based surveys such as the Demographic and Health Survey (DHS). For more on this click [here](#).

Examples: Conduct Participatory Learning Sessions – also known as **Focus Group Discussions (FDGs)**, to engage women who themselves access services. See [Annex I](#).

**MAKE A NOTE:** Make sessions participatory – E.g., the facilitator literally ‘hands over the pen’, providing loads of flipchart and sticky tape and create a safe space - inviting and encouraging women to engage in the process. Use exercises to draw, map or chart the discussion and learning. For more about FGDs click [here](#).

Also see Annex 7 of the ALIV[H]E framework and Annex I.

Develop **Community Score Cards (CSC)**. CSC help to measure the degree of satisfaction and the quality of services. These are most effective when community members themselves generate the questions asked. Outsiders can add questions if wish, as long as the score cards don’t become too long. For more on this click [here](#) and [here](#).

Score cards are mostly conducted through FGDs and can also provide quantitative data if there is space.
People Living with HIV Stigma Index – see if information is available in your country click [here](#)

Develop Anonymous **Community Score Cards** (CSCs), for clients to write their comments as they leave the health clinic once they have accessed services, or to take home with them and fill in and return to their youth community centre when they next visit it. These can be posted into and remain in a locked box and the community coalition holds the key. The cards empower women with a process to provide feedback to the providers. These can be collected by the coalition and the information collated and analysed and compiled into a report submitted to the CCM, PRs and SRs.

**NOTE!** Sometimes score cards can feel scary if people fear their comment may be identified. CSCs can offer insight into service quality and can also work well if delivered with a dialogue process in a safe space. This can almost feel more anonymous and creates a shared sense of challenges and shared solutions.

**Community health report cards** (coded to assess progress) to be completed by this coalition seeking interviews from community members who may not have accessed services. The report cards can be used for questions which offer a **Likert scale** e.g. “rate how you found your appointment today on a scale of 1-10”. Then the %s of respondents who gave a score of e.g. 7 and above, and 4 and below can be recorded out of the total no. (100%) of respondents.
the community to generate public feedback and perceptions on health services and why they have not accessed these. This process serves as an additional diagnostic tool to support service providers and others to identify challenges or barriers to accessing services, understand community perspectives or address areas that need attention.

See Annex M – This is an example taken from the International Development Law Organisation based in Kenya.

| **Personal Experience Report** Establish health advocates that consist of community members who represent various demographics e.g. teen mothers, women living with HIV, individuals needing contraception and/or sex workers. On a specific day they enter the health clinic requesting specific services and report back on their experience. These individual experiences could result in a personal experience report. |
| **Conduct a Community Mapping** to identify what health services exist, what is good and appreciated about them, and if there are problem zones, e.g. places where women feel vulnerable to sexual harassment or critical remarks or physical assault at different times of the day or night. This requires community input and voices. Mapping helps to create a community-centred picture of the environment but most importantly assists advocates to develop indicators for social accountability tools. For more information on this click [here](#) and [here](#) and see Annex G |
PHASE 5 - DATA ANALYSIS

Step 13: Analyse the data collected and document findings

This section has been extracted from How to Effectively Carry Out a Qualitative Data Analysis

Making sense of this data collected can be a daunting task. Ensure along the way that the data you collect is practical for analysis and that it has informed the tool you created to track the data. In any situation - how you ask a question and structure the responses affect how that data is analysed later.

Qualitative analysis, though based on certain ground rules, does not follow a rigid process. Do the following to organise your data

- **Step 1: Transcribe all data** - After you have conducted sessions in communities – often the data can be unstructured and confusing. It is therefore, your duty and essential to make sense out of the data though transcription. The first step of analysing data is to transcribe all data. Transcription simply means converting all data into textual form.

- **Step 2: Organise your Data** - After transcribing the data, you’ll most likely be left with large amounts of information all over the place. A lot of new researchers get confused and frustrated at this point. However, you can get back on track by simply organising your data. You must resist the temptation of working with unorganised data because it will only make your data analysis more difficult. One great way to organise your research data is by going back to your research objectives or questions and then organising the collected data according to these objectives/questions. You have to make sure to organise your data in a visually clear way. You can achieve this by using tables. Input your research objectives into the table and assign data according to each objective.

- **Step 3 - Code Your Data**. Coding is the best way to compress your data into easily understandable concepts for a more efficient data analysis process. Coding in qualitative analysis simply involves categorising your data into concepts, properties and patterns. Coding is a vital step in any qualitative data analysis and helps the researcher give meaning to data collected from the field. You can derive the codes for your analysis from the data you’ve collected (observation will help you identify these), from theories, from relevant research findings or from your research objectives. Some popular coding terms include:
  - Descriptive coding: Summarising the central theme of your data
  - **In-Vivo Coding**: Using the language of your respondents to code
  - Pattern Coding: Finding patterns in your data and using them as the basis of your coding

After coding your data, you can then begin to build on the themes or patterns to gain deeper insight into the meaning of the data.

- **Step 4 - Validate Data**. Data validation is one of the pillars of successful research. Since data is at the heart of research, it becomes extremely vital to ensure that it is not flawed. You should note here that data validation isn’t just ‘one step’ in qualitative data analysis - it’s something you do all through your data analysis process. It has been listed as a step here to just highlight its importance. There are two sides to data validation. First is validity which is all about the accuracy of your design/methods and the second is reliability which is the extent to which your procedures produced consistent and dependable results.
• **Step 5 - Conclusion of Data.** Analysis Conclusion here simply means stating your findings and research outcomes based on the research objectives. While concluding your research, you have to find a valid link between the analysed data and your research questions/objective.

See Annex K as an example of coding data. For access to the actual excel sheets please contact W4GF.

**Step 14: Share the draft findings and report with the Accountability Toolkit Implementation Group**

- This preliminary analysis will be shared as a draft report with the Accountability Coalition for review. If you wanted to you could also consider inviting those who informed your data collection (if it is a FGD then invite the FGD participants), a researcher or a CCM member who supported this work, to be a part of this step. This will help to create buy in and ownerships.
- Once you have received input from the Accountability Toolkit Implementation Group then you can proceed to conclude your data analysis and present your data analysis as a final report.
- Your report has to state the processes and methods of your research, pros and cons of your research, and of course study limitations. In the final report, you should also state the implications of your findings and areas of future research.
- The preliminary report and elements of the final report will be developed according to the timelines and process agreed with the Accountability Toolkit Implementation Group for feedback and review of reports and conclusions.
- Regular calls will take place between the Accountability Toolkit Implementation Group and those conducting the CBM to ensure that everything is on track. Face to face meetings will be held as required.

**Step 15: Finalise findings to identify priority initiatives for advocacy**

- Consolidate information and work with the Accountability Toolkit Implementation Group to strategically share the findings with the CCM and PRs.
- The Accountability Toolkit seeks to strengthen programmes so that findings and data can be presented in a non-threatening way and support the needs and questions of decision-makers on the CCM.

**Phase 6 – FINDINGS INTO ADVOCACY**

**Step 16: Develop an advocacy and communication plan**

Ideas about what you could do with the data include:

- Reports that include summaries or Executive Summaries
- Write to the CCM and present the data with recommendations and request a meeting to share more
- Write an opinion-editorial for the local newspaper
- Hold a community forum to discuss the findings
- Create fact sheets, policy and or advocacy briefs – See Annex L as an example of what is possible. This is an Advocacy Brief conducted by Women4GlobalFund (W4GF) on meaningful engagement in three countries.
- Give interviews about an issue that concerns you to a radio or television audience.

Make sure your report gets read! Keep in mind the following:
• Be Concise – Make it short and to the point. Make it easy to find information.
• Interesting – Take the time to sort through all of your assessment findings, and present and discuss those that are new and compelling.
• Responsive – Consider your audiences. Keep them in mind while writing the report.
• Useful – Write clear conclusions and recommendations. They are more usable. If the reader knows what to do with the information, they will be more likely to do it.
• Attractive – Spend a small portion of your budget to print bound reports in colour to distribute to your important target audiences.

For more on how to present your report check out the UCLA Center for Health Policy Research HealthDATA Train the Trainer Project 4. PERFORMING A COMMUNITY ASSESSMENT CURRICULUM

Think of the following when you design a communications strategy to disseminate key priorities emerging from the CBMF.
• Consider the priorities emerging and determine the key stakeholders and populations that will need further engagement. Are there others beyond the CCM and PRs?
• Select media to be used (adjusting the use of communication channels according to context and audience).
• Create (or adjust, if they already exist) the messages so that they are appropriate for both the media used and the intended audience (such as the Ministry of Health; healthcare providers; law enforcement institutions and specific communities).
• Define how messages will be disseminated and identify tools to be used to do so.
• Budget for the advocacy and communication strategy and ensure this is cost-effective.
• Foster broad partnerships with other civil society, government bodies, universities, media outlets and so on.
• Prepare to engage with the media, regarding what women are requesting. Ensure that individuals in the Accountability Toolkit Implementation Group are prepared to act as spokespersons; make your requests clear; and explain why these are essential, not only for women, but also for the entire population.

Phase 7 - SHARING OUTCOMES AND CONTINUE TO MONITOR SERVICES

It is essential that all communities remain engaged in the Global Fund funding cycle and that we remember that the Country Dialogue process is supposed to be ongoing and this includes during the implementation phase. We must continue to create demand for rights-based policies and programming that supports the priority needs of all women and AGYW especially those who are most marginalised and isolated. All gains must be protected or may be lost.

This Accountability Toolkit will be a new way of working for many women as we hold PRs and the CCM accountable. This is all work in progress. There is no single way to do all this and your experiences - successful and challenging - will be valuable for others to learn from and to guide the advocacy work for W4GF.

REMEMBER TO SHARE WITH THE ACCOUNTABILITY TOOLKIT OUTCOMES WITH THE W4GF SECRETARIATE. WE ARE HERE TO SUPPORT WOMEN IN THIS PROCESS AND ARE EAGER TO KNOW WHERE HOW THIS TOOLKIT CAN BE STRENGTHENED.

For additional information please contact: Ms Sophie Dilmitis, W4GF Global Coordinator, sophie@women4gf.org

First Edition – March 2019 35
Annexes

Annex A - Jargon Buster

**Results** - The outputs, outcomes, or impacts (intended or unintended, positive and/or negative) of an intervention.

**Indicators** - A quantitative or qualitative variable that provides a valid and reliable way to measure achievement, assess performance, or reflect changes connected to an intervention. Note: Single indicators are limited in their utility for understanding program effects (i.e., what is working or is not working, and why?). Indicator data should be collected and interpreted as part of a set of indicators. Indicator sets alone cannot determine the effectiveness of a program or collection of programs; for this, good evaluation designs are necessary.  

**Qualitative** - Data that seeks to measure quality rather than quantity.

**Quantities** - Data that seeks to measure quantity and not the quality.

**SMART Indicators** - Indicators that are: Specific, Measurable, Attainable, Realistic and Time-bound).

**SPICED Indicators** - Indicators that are: Subjective, Participatory, Interpreted, Cross-checked, Empowering, Diverse and Disaggregated. Indicators originating from a woman’s perspective should be SPICED (Subjective, Participatory, Interpreted, Cross-checked, Empowering, Diverse and Disaggregated). SPICED indicators are closer to the priorities and desires of people than SMART (Specific, Measurable, Attainable, Realistic and Time-bound) indicators, which, despite good intent, have a limited understanding of any qualitative key issues. SPICED indicators can be developed to become SMART, but SMART indicators, developed externally are rarely automatically SPICED. Hence the need to work with women and AGYW to develop their own indicators to track the changes they wish to see.  

**Monitoring** - Routine tracking and reporting of priority information about a program, project, its inputs and intended outputs, outcomes and impacts.  

**Evaluation** - Rigorous, scientifically based collection of information about program/intervention activities, characteristics, and outcomes that determine the merit or worth of the program/intervention. Evaluation studies provide credible information for use in improving programs/interventions, identifying lessons learned, and informing decisions about future resource allocation.

**Community based Monitoring** - CBM involves drawing in, activating, motivating, capacity building and allowing the community and its representatives e.g. CBOs, people’s movements, voluntary organisations to directly give feedback about the functioning of public service or function.  

---

16 UNAIDS Glossary of terms Monitoring and Evaluation Terms.  
19 Indian Journal of Community Medicine Services https://www.ncbi.nlm.nih.gov/pmc/articles/PMC2940173/
**Accountability** - Accountability is the obligation of people and organisations to live up to what is expected of them and to report on the use of resources; it also is the assumption of responsibility for one’s actions and the consequences of such actions.20

**Community** - A group of individuals who live in the same place or have or share a common interest.

**Community Mapping** - A community mapping is a map showing important places in a community – for example churches/templets markets, health services, schools bars, places where people meet – places where people socialise and so on.

**Community Participation** - The involvement of community members in activities or initiatives geared to addressing or resolving challenges within their own communities.

**Community Report Card** - An accountability tool used by community members to report progress or the lack of it. A community report card is crucial for identifying community requirements for achieving a desired goal. It is often used to measure or track the quality of health services in a community.

**Community Score Card** - The aim of Community Score Cards (CSCs) is to gather feedback from a community about a service and to use this information to improve the functioning of that service. CSCs are usually implemented on a smaller scale (perhaps in a number of communities served by a health facility) and therefore require fewer resources and less time for implementation.21

**Focus Group Discussion** - Focus group discussions (FGDs) are part of most experiences of participatory research and action. The label FGD embraces a range of different procedures, but the common denominator is that a group of different types of participants is formed, and the group members are given the opportunity to enter into conversation with each other in a safe setting. In participatory research, a FGD is usually convened, mediated and recorded by a team of at least two people, including a facilitator and a note-taker.22

**Gender** - Gender refers to the state of being male or female. These differences are often based on social or cultural constructs rather than biological ones. “Gender determines what is expected, allowed and valued in a woman or a man in a given context. In most societies, there are differences and inequalities between women and men in responsibilities assigned, activities undertaken, access to and control over resources, as well as decision-making opportunities.”23

**Mapping the context** - A qualitative technique, which takes community members through an exploratory and reflective process of their day-to-day lives, needs, strengths and challenges. This is a participatory process, which allows for discussion, analysis and the creation of tools. It helps to identify the relation between different actors in a system and the manner in which the system functions and how this intersects with communities.
**Power Mapping** - Power mapping is a visual tool used by social advocates to identify the best individuals to focus on to promote social change. The role of relationships and networks is very important when advocates seek change in a social justice issue.[1] The power mapping process entails the use of a visual tool to conceptualise the sphere of a person or group's influence. The power map tool helps to visualise whom you need to influence; who can influence the person in power and what can be done to influence the identified person with power. Power Mapping is often politically focused and is frequently used to persuade decision makers to alter how they may vote on an issue. It can also be used to convince an organisation to take a stand, persuade a foundation to give your organisation a grant, or compel a newspaper to write a favourable editorial.²⁴

**Human Rights** - Human rights are rights inherent to all human beings, whatever our nationality, place of residence, sex, national or ethnic origin, colour, religion, language, or any other status. We are all equally entitled to our human rights without discrimination. These rights are all interrelated, interdependent and indivisible. Universal human rights are often expressed and guaranteed by law, in the forms of treaties, customary international law, general principles and other sources of international law. International human rights law lays down obligations of Governments to act in certain ways or to refrain from certain acts, in order to promote and protect human rights and fundamental freedoms of individuals or groups.²⁵

**Gender inequality** - Refers to gender norms and roles, cultural practices, policies and laws, economic factors, and institutional practices that collectively contribute to and perpetuate unequal power relations between women and men. This inequality disproportionately disadvantages women in most societies. It plays out in women’s intimate relationships with men as well as at family, household, community, societal, institutional and political levels. Many women lack access to and control over economic and other resources (e.g. land, property, access to credit, education) and decision-making power (e.g. in sexual relations, healthcare, spending household resources, making decisions about marriage). This lack of power makes it difficult for women to negotiate within or leave abusive relationships or those where they know they could be at risk for HIV and/or other STIs.²⁶

**Gender-transformative approaches** - These encourage critical awareness of gender roles and norms and include ways to change harmful to more equitable gender norms in order to foster more equitable power relationships between women and men, and between women and others in the community. They promote women’s rights and dignity; challenge unfair and unequal distribution of resources and allocation of duties between men and women; and consider specific needs of women and men. Such approaches can be implemented separately with women and girls and with men and boys. However, they are also being increasingly implemented with both women and girls and men and boys together and across generations – either simultaneously, or in a coordinated way in order to challenge harmful masculine and feminine norms and unequal power relations that may be upheld by everyone in the community.²⁷

**Empowerment** - The term empowerment refers to measures that increase autonomy and self-determination in people and in communities to enable them to represent their interests. It is the process of becoming stronger and more confident, especially in controlling one's life and claiming one's rights. Empowerment as action refers both to the process of self-empowerment and to professional support of people, which enables them to overcome their sense of powerlessness and lack of influence, and to recognise and use their resources.

Annex B - Phase 1 Facilitation Guide

Use the following questions as ideas to facilitate a discussion with women who engaged in the Funding request process. Please add to or change these are required.

The discussion should seek to understand how effective the strategy and engagement of women was in the following processes:

1. The funding request development
2. Technical Review Panel (TRP) feedback discussions
3. Grant-making.

At the end of this process it would be good idea to invite a panel of partners to join the group and to share the key outcomes of this discussion. The partners could share their perspective on how effective women are in their advocacy, and what can be done to strengthen their work.

Possible questions to guide the discussion

Engagement and effectiveness in developing the funding request to the Global Fund

- Did women in all their diversity meaningfully engage in the process? Who was supported to participate? Who was not? Did this result in their input into the process?
- Did women apply to the Global Fund for Technical Assistance or for any support to engage?
- Which, if any partners (technical partners and donors) supported women?
- On a scale of 1 – 10 how effective were women in their advocacy? (one being the least effective and 10 being the most effective)
  - Did women prepare a strategy before the county dialogue commenced?
  - Was this written down in the form of a priority paper? How was it presented?
  - Were women strategically placed to engage in different parts of the country dialogue?
  - Did women consistently engage in the entire process or did participation lessen as the process continued?
- Do you feel that the writing team took your input seriously?
- Did you get what you wanted in the funding request?
- What specific outcomes were achieved related to what was advocated for specifically in the funding request development?
- What specifically was in the final funding request that supports women in all their diversity especially for key affected women; AGYW; and that promotes gender equality and transformative approaches?
- What needs to change moving forward? In terms of the national process; the strategy women have and the methodology to advocate?

Engagement and effectiveness in the Technical Review Panel (TRP) feedback discussions

- Did the anyone from the writing team or the CCM Secretariat share the comments that came back from the TRP when they were received?
- If they did not - did you access these from any other source?
- What were the comments made by the TRP?
- Did you have an opportunity to formally review and respond to the comments made by the TRP?
- Do you feel that their comments were relevant and appropriate? Had women raised these concerns?
- Do you feel that the comments were addressed by the writing team?
- Were you able to review the amended funding request?
What needs to change in this process and who can help you to achieve this?

**Engagement and effectiveness during grant-making**

- How many women remained engaged during grant making negotiations?
- What did this engagement look like?
- Was the Principle Recipient (PR) and the Global Fund Secretariat open to your input during this stage?
- Do you know what was agreed in the final negotiations? What was the ‘leakage’ during grant-making and why?
- What needs to change in this process and who can help you to achieve this?
Annex C - Sample Letter Requesting Partner Engagement and Support

(INsert the date)

Dear (Insert a name/s),

Warm greetings to you.

As you may know, our country is currently rolling out programmes and services under the Global Fund grant 2018 – 2020. In addition to other key objectives this grant has committed to reduce gender- and age-related disparities and close gaps between key and vulnerable populations. This includes increasing investments in populations and locations at heightened risk to maximise impact and value-for-money. It also requires the differentiated delivery of a comprehensive package to reach those previously left behind.

As women, some of us meaningfully engaged in the process to develop the funding request and we want to remain equally engaged in implementation. We have committed to ensuring community research that provides additional qualitative data and evidence to strengthen programmes and services delivered for women and AGYW with Global Fund resources.

We have been planning our engagement and would very much like to work with you in this initiative. We believe that qualitative rights-based community data collection can support the quantitative data currently collected to measure progress around women and AGYW. This could compliment the global indicators that currently only count people tested and treated but do not speak to the quality of services or the reality of our lives.

We now have a simple and reliable tool that enables community and civil society organisations to collect data and we would like to invite you to a meeting where we can discuss this and present the synergies we see and the benefits for all of us. Please take a look at the W4GF Accountability Toolkit, which is attached to have a better understanding of what we are suggesting.

I would really appreciate your support and would be grateful if you could confirm your availability to me before (Insert date here). We look forward hearing from you and to be working together on this important effort.

Many thanks

(Insert your name here)

Annex E - ToR for Lead Organisation or Network

1. Introduction
Now that the new Global Fund Strategy (2017-2022) Investing to End Epidemics is being implemented, many communities and networks have engaged at the national level and some have meaningfully participated in developing HIV, TB and malaria funding requests submitted to the Global Fund in Window 1 through to Windows 4, which has resulted in a total of 226 funding requests submitted to the Global Fund and 133 approved by the Global Fund Board.29

As a financing institution without country presence, strategic partnerships and strong capacity of women is critical to ensure impact and investment that promotes and protects human rights and gender equality as the bedrock of effective programming. Through the Accountability Toolkit developed by W4GF, a coordinated body is able to maintain focus and monitor and track programmes and services funded by the Global Fund. This ensures greater impact for people and communities in all their diversity in Global Fund implemented programmes.

This Accountability Toolkit ensures that meaningful engagement of women continues post grant making and into implementation.

2. Scope for The Lead
This Lead organisation/network (The Lead) will support all work linked to the Accountability Toolkit that enables women’s preparedness to influence Global Fund grants through CBMF and tracking of programmes – highlighting what is and is not working well or what requires refocusing and ensuring that this is channelled effectively to influence change.

The Lead network/organisation must be committed to conducting the following tasks:

- Support and coordinate the work of the Accountability Toolkit Implementation Group
- Review suggested materials and decide methodologies to be used in monitoring and tracking programmes and services supported by the Global Fund
- Coordinate and report data findings through effective advocacy on behalf of the Accountability Toolkit Implementation Group
- Maintain relationships with all partners especially the CCM and PRs and participate in national platforms and consult and debrief all Accountability Toolkit Implementation Group members
- Coordinate communications with W4GF as well as with meetings with key stakeholders and build support at the national level
- Conduct virtual meetings and maintain online social media platforms.

3. Lead Criteria
The following diversities and criteria are essential for the Lead that will support work linked to the Accountability Toolkit:

- Able to demonstrate ties to the CCM and national networks addressing HIV, TB or malaria;
- Be human rights based and have a focus on HIV, TB and malaria
- Directly represent the community it works who come from communities with generalised and concentrated HIV epidemics of people in all their diversity;
- Have strong affiliations to networks or organisations of women/people living with HIV; and human rights groups; networks of TB and malaria who are willing to support this work; including women from key populations, including but not limited to women with disabilities, women who use drugs, women who engage in sex work and gay, lesbian and transgender people.

29 Global Fund Tracker available here
• Have ability to administer funds and staff who can dedicate time to this work.

4. **Key Commitments**

Throughout the project the lead will:

• Commit themselves to implement this and ensure the work is resourced and that this is seen as an extension of existing work that they are doing;

• Provide further information and enable greater diversity of voices engaging in the process through feedback to networks and regional and diversity-specific colleagues;

• Engage with key advocates and activists, to facilitate their participation and input, and represent priority issues around HIV, TB and malaria;

• Ensure that the voices of civil society, especially women and women living with HIV and key populations shine through any consultation and reporting.

Annex G - Community Mapping

Annex H has been adapted from TOOLS TOGETHER NOW! 100 participatory tools to mobilise communities for HIV/AIDS

A community mapping is a map showing important places in a community – for example churches/temples, markets, health services, schools, bars, places where people meet – places where people socialise and so on.

Why use it?
- Community mapping is useful to provide a non-threatening way to start a discussion about sensitive subjects including sex, HIV/AIDS, drug use and so on. Identify which places (and people) are important in the community and why.
- Explore women’s concerns about their communities and what they would like to change
- Identify services and resources available in a community and gaps in services
- Highlight different group views if possible – for example different constituencies might draw different things in a map of the same area compared to other groups.

How to use it?
- Divide large groups into peer groups to make separate maps to compare different views of the community.
- Discuss what sorts of places to show on the map
- Ask participants to draw a map showing all the places the participants think are important to them
- If the group has trouble getting started - suggest that they begin by marking themselves on the map where they are right now.
- Then discuss what is shown on the map.

Facilitators notes
- If the group is large and uses paper to draw the map stick serval pieces together and add more paper as the map grows
- Different participants may draw very different maps of the same area and this is okay. It reflects their different views of the community and of the topic discussed
- Some marginalised groups for example drug users maybe concerned that information they put on the map for example – where they buy or use drugs will be used to punish them. Agreeing how the map will be used before you start may help people to feel comfortable.
- Community maps can show how things looked in the past and/or how people could like a place to look in the future
- Discuss how to improve the situation in the community by comparing maps of the present and the future

Adaptations of Community Mapping
- Start by requesting participants to work in groups and think about their ideal medical service and to draw this on a large piece of paper. For this work split the men and women. Ask them to think about the following:
  - What are their top priorities and what they would love to see when they access health centres.
- Once they are clear about what they would like to see – turn to what their reality is. Ask each
team to conduct a community mapping to identify what services exist (health and other). This mapping provides a community-centred picture of the environment. Most importantly, assist advocates to develop indicators for social accountability tools.

- Provide the following instructions and request them to draw the following:
  - Draw the community and highlight all the places that are important and often visited
  - Highlight where the clinic is, other medical services, the market place, places where you hang out, places where people get information, Places where you go to access condoms, contraceptives, HIV/TB medications. Places that you like to visit
  - Once you have drawn your map, think about the medical services you have identified. **IMPORTANT:** sometimes people identify the local gas station; public toilets or dad’s bottom drawer as sources to access condoms. Keep in mind that what OUTSIDERS think of as medical facilities may be the last place young people or AGYW would go to access these essential things.
  - What good things from your list of ideal services already exist in current service that they actually have access to?
  - What challenges remain with existing service?
  - Facilitate a discussion and enable participants to use their inner visions to dream what would really work for them and to appreciate what might already be there and it will be easier later to engage with the service providers
  - As you think about the medical facilities – **MAKE A NOTE** of any information you have about mechanisms that exist to foresee barriers to accessing services. Also **MAKE A NOTE** about scenarios where a human rights violation occurred. Do you know if the service provider has measurements in place to prevent or address this? What happens if a client makes a complaint whilst accessing services? What corrective measures exist if any?
  - Also add places on the map that are not safe and if there are areas that have any specific challenges for communities or places where people become vulnerable. **MAKE A NOTE!** This may change from day to night. Safe places by day time may be not safe at night. E.g. the bus station and sometimes their dad/uncle comes home or drops by from work. Don’t forget to ask these questions as sometimes young people might be too shy/ashamed to mention the dad e.g. themselves…. Encourage them also to think about “people like me here” rather than ‘me’ so they have a veil of anonymity.
  - Once the work is done participants can display their drawings on the walls (which are on flipcharts stuck together, so they are relatively big). They can do a gallery walk and review all the drawings. No-one from one group can mark the other group’s drawings. They have to respect each other’s viewpoints but people in one group can add something to their own map(s) if they like, after the shared discussions. (e.g. once men added something to their drawing which the women had thought of, but the men hadn’t thought of – and they acknowledged the women for the thought – which in itself felt like a bit of a coup!)
  - Review and build consensus based on the information previously collected on the national context.
  - Create a safe space to share, reflect and assess what can be done with the tools outlined in this Accountability Framework and where exactly this should be done. What are the specific services that need to be explored?
  - Present all the different CBMF activities that are possible and agree which ones are the best to use for this specific programme

30 See, for example, an article about the UN Women et al global treatment access review, 2017: https://www.hhrjournal.org/2017/12/in-womens-eyes-key-barriers-to-womens-access-to-hiv-treatment-and-a-rights-based-approach-to-their-sustained-well-being/
• Work with participants to create their own SPICED results and indicator matrix – What are the changes they want to see? Revert back to Annex E.
Annex H - Key Informant Interviews (KIIs) and/or In-Depth Interviews (IDIs)

The UCLA CENTER FOR HEALTH POLICY RESEARCH created this annex. This is Section 4: Key Informant Interviews from the UCLA Center for Health Policy Research Health DATA Program – Data, Advocacy and Technical Assistance

Purpose - Key informant interviews (KIIs) are qualitative in-depth interviews with people who know what is going on in the community. The purpose of KIIs is to collect information from a wide range of people—including community leaders, professionals, or residents—who have first-hand knowledge about the community. These community experts, with their particular knowledge and understanding, can provide insight on the nature of problems and give recommendations for solutions.

The following are two common techniques used to conduct key informant interviews:

- Telephone Interviews
- Face-to-Face Interviews

When to conduct key informant interviews

- To get information about a pressing issue or problem in the community from a limited number of well-connected and informed community experts.
- To understand the motivation and beliefs of community residents on a particular issue.
- To get information from people with diverse backgrounds and opinions and be able to ask in-depth and probing questions.
- To discuss sensitive topics, get respondents’ candid discussion of the topic, or to get the depth of information you need. Individual or small group discussions (two to three people maximum) create a comfortable environment where individuals can have a frank and open in-depth discussion.
- To get more candid or in-depth answers. The focus group dynamic may prohibit you from candidly discussing sensitive topics or getting the depth of information you need. Sometimes the group dynamic can prevent some participants from voicing their opinions about sensitive topics.

Planning the key informant interviews - There are several key steps involved in planning and implementing KIs as a means for data collection. Review the following activities and prepare accordingly with your community partnership members.

- Gather and review existing data
- Determine what information is needed
- Determine population and brainstorm about possible key informants
- Choose key informants
- Choose type of interview
- Develop an interview tool
- Determine documentation method
- Select designated interviewer(s)
- Conduct key informant interviews
- Compile and organise key informant interview data

Gather and review existing data - Collect and review existing research data and reports before determining what additional information needs to be collected from key informants, as the information
you are looking for may already exist. You can piece together a great deal of information about a community or a health issue from different sources.

**Determine what information is needed** - The first step in preparing for your KIIS is to identify the information you want to gather. Once you have drafted your primary questions, next determine what type of data is needed. For example, do you want to collect data on community practice, community opinions, or existing services and service utilisation? The type of data needed helps you identify the best people to interview.

**Determine population and brainstorm possible key informants** - Before selecting key informants, it is important to map out your population of interest, or target population. This target population could include all community residents living in a particular city or zip code or could be a particular portion or group within that geographical region (such as a racial/ethnic minority, adolescents, or women). Once you are clear about the target population you can better brainstorm possible key informants who are knowledgeable and closely linked to your population of interest.

**Choose key informants** - Carefully select the key informants. Remember key informants must have first-hand knowledge about your community, its residents, and issues or problems you are trying to investigate. Key informants can be a wide range of people, including agency representatives, community residents, community leaders, or local business owners.

The first step in the selection process is to identify and create a list of potential key informants—individuals or groups you want to interview to gather information about your target population. In creating this list try to get a diverse set of representatives with different backgrounds and from different groups or sectors. This diversity provides a broad range of perspectives. For example, your list could include people from different sectors, such as health service administrators, religious leaders, city government officials, young mothers, minority populations, or youth advocates.

Second, you need to narrow down your list. Review your list and identify one or two persons from the same sector who you believe can provide needed information. However, keep in mind that your final group should have a diverse mix of key informants in order to ensure a variety of perspectives. For example, if investigating gang activity in a community, you could approach and solicit the input of a wide range of experts who are knowledgeable about the problem, such as church leaders, local store owners, neighbourhood-watch-association representatives, parks and recreation staff, parents, youth advocates, police, and teachers. Key informant diversity is important. If you only interview people of a particular background or sector you may end up with results that are one-sided or biased. Interviewing key informants from a wide range of sectors allows you to look at varying perspectives and underlying issues or problems.

The number of people you interview largely depends on your data needs, available time, and resources. Typically, 15-25 interviews are the most you need.

**Choose type of interview** - The next step is to select a technique to obtain information from each of the key informants—either by telephone or face-to-face. The technique you use largely depends on your key informant’s availability and preferred choice, as well as your available time, resources and overall logistical feasibility. However, these techniques are not mutually exclusive; both options may be used effectively.
The following is a description of each:

A. Telephone Interviews: Telephone interviews may be the most convenient and least time-intensive way to interview busy key informants. The major shortcoming of this approach is not having the personalised interaction that is otherwise possible through a face-to-face interview. However, if you develop a structured telephone key informant interview tool to address your primary questions, the telephone interview may provide all the valuable information you are looking for.

Arranging Telephone Interviews: Once you have compiled your list of key informants, distribute this list to your partnership members and ask them to identify those individuals they know. If appropriate, the partnership members can help access key informants by personally contacting them, providing a brief explanation of the community needs assessment project, encouraging them to participate in the interview, and facilitating communication between them and the interviewer. The designated key informant interviewer would then contact them to schedule a convenient time to conduct the interview.

When contacting key informants, stress the importance of their input and let them know ahead of time about the time commitment. Telephone interviews should last no more than 15-25 minutes, as it is difficult to schedule longer periods with busy people. However, once engaged, informants may be willing to speak longer. So, it is a good idea to schedule at least an hour of your time to allow for interviews that run longer.

B. Face-to-Face Interviews: Face-to-Face interviews are the most frequently used format. This format is more time intensive because it requires additional scheduling and logistical planning. The advantages to this technique are that it provides a free-exchange of ideas and lends itself to asking more complex questions and getting more detailed responses.

Arranging Face-to-Face Interviews: Again, ask your partnership members if they know any of the identified key informants, and allow them to make the first contact. The designated key informant interviewer would then schedule a convenient time and place for the interview. As a general rule it is important not to schedule too many interviews in one single day. After each interview the interviewer should take some time to make additional notes and organise initial findings or impressions, so time should be allotted for this after each interview. Face-to-face interviews typically last 20-30 minutes. Again, once engaged, informants may be willing to speak longer.

Persistence is key. Making it into someone's busy schedule is not easy. Anticipate this challenge and don’t give up! This is true for both telephone and face-to-face interviews. Continue calling until the pre-designated cut-off date.

Develop an interview tool: Prepare an interview tool to guide the discussion and make sure your questions are answered. The interview tool typically contains an outlined script and a list of open-ended questions relevant to the topic you would like to discuss. Begin with the most factual and easy-to-answer questions first, then follow with those questions that ask informant’s opinions and beliefs. End with questions that ask for general recommendations. Don’t be afraid to ask probing questions during your interview, as these help to clarify informant’s comments and get detailed information.

The following are the main components of the interview tool:

- **Introduction**: Before beginning the interview introduce yourself and your project. As a general rule the introduction you write should do the following: 1) help establish the purpose for the interview; 2) explain who is involved in the process (community partnership members); 3)
establish credibility for the interview and yourself as the interviewer; 4) explain why their cooperation is important in collecting the information you need; and 5) explain what will happen with the collected information and how the community will benefit.

- **Key questions**: Draft five to ten questions important to getting the information you have set out to collect. The key questions should be designed in order to elicit more revealing information about your community issue or problem. Ask questions that draw upon the informant’s expertise and unique viewpoint.

- **Probing questions**: Probing questions encourage participants to reflect more deeply on the meaning of their comments. These questions are also useful at getting people to think about the cause or root of the problem you are investigating.

- **Closing question**: Provide an opportunity for the key informant to give any additional information or comments. Also ask the key informants for their recommendations or solutions in addressing the problem.

- **Summary**: If time permits, quickly summarise the major comments heard throughout the interview and ask informants if you covered all the major points. Ask them if there is anything else they would like to tell you that you have not asked them. Finally, thank them for their time.

After completing the interviews, it is a good idea to send thank you notes to the interviewees.

**Determine documentation method** - Compile interview information to ensure data collection efficiency, quality, and consistency across interviews. You want to make sure all the information you have set out to collect is captured.

There are two methods you can use to record the interview responses:

- **Note-taking**: Interviewers should plan to take notes during the interview as well as directly after. It is wise to type up and print the key questions you have drafted (approximately five to ten) leaving enough space between each question to manually write the key informant’s comments while conducting the interview. However, taking notes while interviewing someone could be quite a balancing act. Interviewers may find themselves engaged in the conversation and not taking notes. The best advice is to plan to take notes during the interview but not allow note taking to disrupt the flow of the conversation. Immediately after each interview the interviewer should take some time to review their notes and fill in any details, expand on their note taking short-hand, or add important comments or points made. It is a good idea to do this immediately after the interview when things are still fresh in their mind. Waiting several hours or a day may mean losing a lot of valuable interview information.

- **Tape recording**: Interviewers can also use a tape recorder to document what key informants say. This approach allows the interviewer to freely engage in the conversation without worrying about note taking. The interviewer may take brief notes during the interview, write down and organise notes at the end of the interview and use the tape recording to fill in information gaps or details. It is necessary to get informed consent from the key informant to audiotape the interview. So, it is a good idea to discuss the possibility of audio taping before scheduling the interview. In this scenario, it is important to emphasise that: 1) the interview will be recorded so that none of their important insights and discussions are missed; 2) the interview will not be recorded if they do not prefer it to be; and 3) the audiotape will not have their name on it and will be kept in a secure location.

**Select designated interviewer(s)** - Determine who in your partnership has the skills or background to conduct the interviews. Interviewers should be good listeners, have strong communication skills, be able to take detailed notes, be detail oriented, and comfortable meeting and talking to new people. For
consistency it is wise to only have one or two designated interviewers.

**Conduct key informant interviews** - The interview tool your partnership develops will help structure the discussion and carefully sequence the various key questions. Interviewers can practice and familiarise themselves with the script and questions before meeting the key informants.

**Starting the Interview** - The interviewer should begin by thanking the respondent and stressing the importance of the meeting. At this time the interviewer can make any clarifications and answer any questions about the community assessment and the purpose of the interview. However, careful considerations should be taken in order not to influence or bias respondents’ answers.

Interviewers should listen carefully for recurring and new opinions or beliefs. They should take notes highlighting important points made. Throughout the interview it is important that interviewers’ pace themselves. In order to compare data collected and identify themes it is important to get answers to certain key questions from every person interviewed. At the end of the interview ask the key informant if they have any questions or final comments. Let them know what will happen with the information and conclude the interview by thanking them for their time.

**Compile and organise key informant interview data** - As soon as your partnership starts the process of collecting the key informant interview data, you will suddenly have a lot of data to manage. It is important to think about this while in the planning phase. Specifically, you want to discuss the following with your partnership and note your decisions:

A. **What will the key informant data look like once it is collected?**
   - This depends on what the key informant interview instrument looks like and what types of questions you asked. You may have a broad range of key informant responses.

B. **How will the key informant data be compiled?**
   The key informant interviews you collect will be qualitative. After finishing a key informant interview, the interviewer should make notes and write down any additional comments or impressions. Within the next couple of days, the interviewer or designated person should type up the interview notes, using the audiotapes (if applicable) to fill in any gaps. All of the interview notes:
   - Anecdotes, and discussion points need to be typed into one-word processing document. However, this has the potential of being a really long document, depending on how many interviews were conducted and how long they were. Really long documents are not very helpful, as there is no easy way to see relationships across different focus group discussions. So, the interviewer may want to consider organising qualitative data right from the data entry stage into major categories. These categories are most commonly the interview questions that were asked. This way, you end up with a document of all of the interviewees’ discussions organised under each question.
   - One individual or agency should take responsibility for creating the master file, developing the categories, and cutting and pasting the notes into the corresponding categories.
   - One individual or agency should take responsibility for keeping track of the audiotapes.

**Where will the key informant data be processed and compiled?**
- Plan where the data is at all times during the data collection process. This eliminates any confusion that may arise when multiple partnership members and agencies take on the survey data collection and compilation activities. It also clarifies ahead of time what specific steps need to be undertaken to collect, enter, compile, and analyse the different data pieces.
Once your partnership has thought through the above points, then you should have a clear idea of where (when?) the interview data will start being collected and where the data will end up.

**What about informant confidentiality/anonymity?**

- Ensuring confidentiality/anonymity is very important. Depending on the nature of the topic, let key informants know that you will not use their names or any other potentially identifying information (such as title and organisation) in your final report or publications. Assure them that their responses will be kept confidential—results will focus on the content of the discussion rather than identifying who said what. This may help encourage them to participate and make them more comfortable and willing to openly share their opinions about your topic of interest.

- After collecting data from individuals—referred to as human subjects, there are a few important rules to consider when handling their responses:
  - Keep any identifying information in a locked place (such as name, organisation, title, phone number, or address). This can be simply a locked filing cabinet drawer or password protected computer, which ensures that no one has access to the confidential responses.
  - Keep identifying information in one place. This ensures that fewer people have access to private information.
  - Once the data is compiled, remove any identifying information that is associated with it. When typing up your tape-recorded key informant interviews, assign each respondent in your word document a unique number. You can start with “1” and just assign a different number to each key informant you enter. Keep your interview notes and any printed documents in the same locked drawer.

---

Annex I - Focus Group Discussions

Adapted from Belfrage and Wigley Guidelines for Focus Group Discussions

A Focus Group Discussion (FGD) is a qualitative research technique consisting of a structured discussion and used to obtain in-depth information (qualitative data) from a group of people about a particular topic. The purpose of the discussion is to use the social dynamics of the group, with the help of a moderator/facilitator, to stimulate participants to reveal essential information about people’s opinions, beliefs, perceptions and attitudes.

FGDs are often conducted among homogenous populations, who usually share a common characteristic such as age, sex, or socio-economic status, which encourages a group to speak more freely about the subject without fear of being judged by others.

Confidentiality in FGD can’t always be assured by the facilitator/researcher – by nature of the fact that the people in the FGD will hear each other’s opinions/experiences and you can only trust that they won’t share them outside of the group; this should be reflected in the FGD consent form.

Key Steps to conduct a FGD:

**STEP 1: Select field team**

- Moderator: The moderator/facilitator should have knowledge and experience or skills in leading FGDs, and at the least, understand the importance of assisting all members to speak at some point, be able to manage dominant group members, and have an ability to ask open questions and follow up with relevant additional questions to stimulate conversation and reflection. It is not desirable to run them as a question / response, question / response exercise. In that situation, people are more likely to respond what they think the interviewer wants to hear.

- Interpreter: Make sure the FGDs are conducted in the local language or in the language the participants feel most comfortable in, and if needed, use interpreters that have been trained/or train them in their role as translators in FGDs. (They need to translate directly and, as far as possible, not get involved themselves in the discussion, then translate back an edited version).

- Observer/recorder: It can be effective to have two people conducting the focus group -- one asking the questions (the moderator) and one writing and observing expressions, body language etc, which can give clues about sensitivities etc. When using an interpreter, however, the moderator might be able to do both given the lag time for translation.

- Other staff: There needs to be a clear motive if any other staff is to be present during a FGD.

- Make sure that none of the field staff are biased to the subject at stake (i.e. no personal or organisational interest) or have a role that might obstruct participants to speak out freely.

**STEP 2: Determine what types and number of groups needed**

In each location, there should be interviews with elderly women, elderly men, adult women, adult men. If it does not inhibit conversations, age groups or gender could be mixed when it would be inconvenient to them to be separated, as long as the topic does not relate to or is affected by gender or age stereotypes, and as long as there is some possibility of also gaining disaggregated information.

- Interview adolescent girls and boys if the moderator is trained or experienced in interviewing young people under 18. Be particularly careful in interviewing younger children and consult with UNICEF or experts in child protection for assistance.

- Ensure, wherever possible, to focus on specific groups with disabilities and attempt to meet with indigenous or other minority groups.
• Group size: the ideal size is 8-12 people; however smaller and larger groups can work well and oftentimes judgement must be made quickly on the spot so as not to offend or inconvenience people. If the space available is noisy, try to make the groups smaller to facilitate hearing.
• Make every effort to ensure that non-participants are not present or within hearing distance, particularly as this can give rise to protection risks.
• Try to ensure that people such as community leaders or representatives are not mixed in amongst the groups, as they may well discourage others from speaking freely. If such people are present, it is best to interview them separately.
• The nature of this kind of work is that all the best laid plans are likely to disappear out of the window when the team arrives at the venue, and quick thinking and flexibility is required to manage the best outcome in what is likely to be chaotic circumstances.

STEP 3: Prepare for the individual FGD

• Location for FGD: Try your best to organise the meeting in a private, safe and comfortable environment (e.g. not direct under the sun), and that it is accessible (especially to persons with disabilities, older persons, and women). In the current conditions, be prepared to compromise and check with the group that the compromise works for them.
• Date and time for the FGD: ensure mobilisation of participants before the meeting as far as possible and inform community leaders in advance of the discussion so they are aware of it. If a local agency is facilitating your access to communities, ask them to explain the purpose of your visit and to the extent possible, prepare the groups to reduce time lost in confusion.
• Plan with your team beforehand how you will divide groups between you. You want to aim for as much consistency of approach so that results are comparable.

STEP 4: Conduct the FGD: Introduction

• Introduce the focus group by explaining the reason for the visit. It is important to explain the rationale to avoid raising expectations. Explain what you will do with the information, and be very clear that when asking about needs, there is no guarantee that things will change, however to the extent possible, you will pass on their feedback to relevant authorities.
• The discussion might touch upon some sensitive issues such as security and violence. Ensure participants there are no requirement to respond if the question causes discomfort. Participation is completely voluntary, and participants are free to answer or not, or to leave at any point.
• Remind participants that confidentiality should be kept throughout in that no names or personal information will be disclosed or used in any publications/reports nor should participants share what was said and by whom after this FGD as per the consent form.
• Explain that you will be taking notes during the interview to help you remember what was said, but that these are for your own personal use and will not be shared with others.
• Make sure that your notes reflect as closely as possible what was said. When it comes to analysing the outcomes, the more detail captured the better, and the more likely you are to have quotable passages which can be very powerful. Scant notes can render the exercise useless.
• Ask if there are any questions before starting the interview and make sure to take some notes about the demographics of the group.
• Be mindful that these are people who have suffered great loss and trauma and are also all individuals who have their own stories. Without spending all the time set aside building rapport, and without getting too personal, it is advisable to spend some time showing genuine interest in the people to whom you are speaking, to learn a bit about them and to put them at
ease. You might like to ask people what they did before the typhoon, and in our experience, people also don’t mind telling a bit of their experience of the typhoon. Use your judgement and be a bit creative.

**Step 5: Tips for the facilitator, observer and interpreter**

- Notice body language and expressions as relevant.
- Make sure to listen to participants, non-judgmentally and intervene if others are judging them, reminding them of the respect for other opinions.
- Encourage that only one person talks at a time and remind people and the interpreter not to go too long in between translation, as you will lose a lot of the detail.
- It can be helpful sometimes, especially in one on one interview, to put a question in the form of a role play. For example, you might say something like, “imagine I’m the head of (insert local authority or aid agency), what would you say to me?”
- Use neutral comments and encourage the quieter people to contribute – “Anything else?”, “does anyone else have something to add?”, “How about this side of the group?”
- Explain to interpreters the importance of translating sentence-by-sentence and not summarising what people say. Interviewers should help interpreters by asking only one short question at a time and by reminding them about confidentiality of the discussions.
Annex J - Sample Workshop Agenda

WORKSHOP OBJECTIVES
- Build understanding of current grant, the CCM; PRs, SRs, the allocations and implementation arrangements etc as well as understanding the strategic entry points to influence ... whom/what?
- Amplify the voices of women to influence health programs, particularly those supported by the Global Fund
- Learn to implement the Accountability Framework to monitor and feedback successes and challenges related to services delivered under the Global Fund investments, from the district to the national level
- Strengthen the Accountability Toolkit Implementation Group community-led coordination and CBMF efforts

WORKSHOP OUTPUTS
- A work and action plan

Day 1: To increase understanding of national Global Fund processes as well as the strategic entry points. This also includes an overview of the current grant, the CCM; PRs, SRs, the allocations and implementation arrangements etc. Who is doing what where?

Day 2: Understand how to use the Accountability Framework and starting to think through where this work will happen and some of the key elements.

Day 3: Continuation of day 2 – thinking through where, when, what and how and what CBMF techniques will be utilised

Day 4: Finalising workplans and agreeing ways to sustain CBMF efforts. This day includes defining ways of work and agreeing where, when, what and how.

Day 1: To increase understanding of national Global Fund processes as well as the strategic entry points. This also includes an overview of the current grant, the CCM; PRs, SRs, the allocations and implementation arrangements etc. Who is doing what where?

**Session 1.4. Gender transformative programming on AIDS, TB and Malaria**  
*Objective: To strengthen participants’ understanding of what ‘gender transformative’ means and why it matters for vulnerability/responses to AIDS, TB and Malaria and linking this to the socio economic model*  
- Introduction and discussion of the ‘gender transformative continuum’ and why it matters to responses to AIDS, TB and Malaria  
- Discussion of key terms and concepts relating to gender and SOGI, such as sex/gender and gender identity/sexual orientation

13:00 - 14:00  
**LUNCH**

14:00 – 15:00  
**Session 1.5 Global Fund supported programmes in the country**  
*Objective: To strengthen participants’ understanding of funding model process and Global Fund processes (including NSPs, CCMs and Country Dialogues) and of relevant support available to communities/civil society (including from technical partners and the CRG Special Initiative) Presentations and questions/answers on:*
  - Country level processes for responses to AIDS, TB and Malaria and points of intervention for communities/civil society - including CCMs (guidelines, functions, etc.), NSPs, Country Dialogues, Funding requests and grant-making  
  - What are key programmes for young people and are these included in Global Fund supported programmes? Who is responsible for implementation – Where is this happening?  
  - Reviewing the funding request as assessing its ability to respond to gender and through transformative/sensitive, including age diversity approaches  
  - Country-level support available, including through Global Fund Technical Partners and the CRG Special Initiative/Communication Platforms  
*DISCUSSION: Sharing by participants of their experiences and lessons learned from the reality of country-level Global Fund processes*

15:30 – 15:45  
**BREAK**

15:45 – 17:00  
**Session 1.6 Continuation of discussion** – Validating the Accountability Toolkit – Everyone should have read this – this is an opportunity to seek clarity on the Accountability Toolkit

17:00 – 17:30  
**Session 1.7. Wrap-Up** of key issues raised in Day 2 and (if required) attention to parking lot issues or the bowl

**DAY 2:** Understand how to use the Accountability Framework and starting to think through where this work will happen and some of the key elements.

Annex L - Meaningful Engagement of Women in the Funding Model: Recommendations Kenya, Uganda & Zimbabwe

**Background**

Many countries will submit concept notes to the Global Fund for consideration in the next allocation cycle under the new Global Fund Strategy 2017 – 2022. Recognising the opportunity to ensure appropriate and focused programming for women and girls highly vulnerable to HIV, TB and malaria including women from key populations, Women4GlobalFund (W4GF) conducted interviews of women and gender advocates in three countries - Kenya, Uganda and Zimbabwe - to identify how the Global Fund’s funding model can be further strengthened to facilitate more meaningful participation. Supporting organised and meaningful participation of women in all their diversity in national processes will help guarantee programmes and services are grounded in reality and provide the greatest potential to reach women with essential services. This advocacy brief summarises key challenges and recommendations from these interviews in the areas of country dialogue processes, implementation and monitoring.

**Identified Key Challenges**

Women in Kenya, Uganda and Zimbabwe who were interviewed for this short study were asked questions related to the level of involvement in various country and Global Fund processes since the inception of the funding model in 2012. The following table summarises key issues and challenges that continue to inhibit meaningful participation and any progress made.

<table>
<thead>
<tr>
<th>Identified Key Challenges</th>

31 Including lesbian and transgender women, sex workers, and those affected TB and malaria communities
Key Recommendations
As the Global Fund moves forward with the operationalisation of the new 2017 – 2022 Strategy we call on the Global Fund and technical partners to address the following recommendations immediately to ensure more meaningful engagement of women in all their diversity working on HIV, TB and malaria.

1. **Strengthen guidance on the meaningful engagement:** The Global Fund must revise and strengthen its guidance specifically on how countries should engage women in all their diversity at all stages of the funding model to ensure effective Global Fund country processes;

2. **Sustain support for the Global Fund’s Community, Rights and Gender (CRG) Special Initiatives,** such as the regional coordination and communications platforms; and expanding support to the Robert Carr Civil Society Networks Fund (RCNF);

3. **Continue to build knowledge and understanding of gender transformative programming:** The Global Fund and partners must facilitate knowledge-building around gender linked to human rights;

4. **Bolster support for women in all their diversity on Country Coordinating Mechanisms (CCMs) and beyond** through providing technical and financial resources to meaningfully participate in National Strategic Plan (NSP) development, CCMs and Global Fund processes – including for capacity development and advocacy;

5. **Support capacity building of women to monitor implementation** by providing funding for monitoring efforts, data collection guidance documents and tools. The Global Fund and partners must make certain countries collect disaggregated data that speaks to the specific issues that women face;

6. **Ensure that all CCMs consistently follow the CCM eligibility criteria,** to ensure CCMs are accountable to civil society and beneficiaries of Global Fund supported programmes; and

7. **Channel greater funds for civil society implementation:** The Global Fund must refocus and promote funding for community-based responses, community systems strengthening, and rights-based programming.

**Recommendations: Strengthening the Meaningful Engagement of Women in all their Diversity**

1. **Strengthen guidance on the meaningful engagement**
Throughout Global Fund processes it is essential that women’s organisations and networks are given adequate time for consultation, debate, and feedback, and that women in all their diversity are effectively prepared to successfully engage. The current Global Fund guidance is too broad and should be revised to more appropriately steer countries on how to meaningfully engage women by requesting countries to:

* **Document the consultative processes that took place,** including with recognised and credible women-led and centred CBOs; networks; and activists (with clear mandates and outreach to constituencies). This documentation should be in addition to meeting minutes and attendance lists, and should describe who was involved, what processes were put in place for consultation, what was the response, how responses were incorporated into broader processes, strategies, concept notes and grant-making documents, and what lessons were learned to improve on in the future.
- **Expand seats for women and key populations on CCMs.** Among the three countries, women responded that overall, the number of women and key population members on the CCM were inadequate to represent such a diverse group. For example, the Kenyan CCM currently has no gender champion and only one woman representing all of key populations and in Uganda one transgender woman reported, “Although there is a CCM key populations representative he is not given ample space to articulate issues”.

- **Allow constituencies to caucus on their own** with enough time to develop evidence-based, costed, priority programmes that can be collated and submitted to the NSP and concept note writing teams. This process should be carried out in safe and inclusive spaces, and led by credible networks over a period of time. This is especially important for women from key populations who are criminalised and marginalised. Written submissions should speak to available data, existing gaps, and collectively developed programmatic priorities and strategies to be considered ahead of the NSP and concept note consultations. Constituencies should be informed on what was included in the NSP or not (and why) and be clear on the amount of resources allocated.

- **Include women in all their diversity in each technical working group** for the development of the NSP and concept notes. Women from Uganda demanded to have a specific technical working group that addressed human rights and gender as no other working groups were addressing these areas. It is critical that adequate time is provided for coordination and sharing between the technical working groups. Nearly all respondents noted that they were strictly confined to their technical working group and unable to share and coordinate content between the technical working groups especially between HIV and TB. One woman from Kenya said “When I wanted to know what was happening in the TB working group during the NSP development process I was told - female sex workers were not a key population so stick to your technical working group”.

- **Publish and communicate country dialogue schedules** months prior to the start of country dialogues to give civil society an opportunity to adequately prepare, consult and prioritise. In addition, CCM schedules and annual work plans should be available to civil society. “We were called in the evening and told to be ready the following day, so there was no time to properly consult with my community, I was in the meeting but I spent most of my time outside of the meeting consulting with my own constituency instead of sitting at the table” sex worker from Kenya.

- **Share key documents**: These include various iterations of concept notes (drafts and final), as well as comments from the Technical Review Panel (TRP), draft implementation plans and budgets. It was clear from women interviewed that documents are not shared regularly and with all CCM members. One interviewee from Zimbabwe described the result of lack of sharing documents and being informed of the content of drafts and final documents, “All the gains we made in the concept note development were lost in the grant making”.

2. **Sustain support for the Global Fund’s Community, Rights and Gender (CRG) Special Initiatives**, including the regional coordination and communications platforms which one woman from Uganda noted as being “important as they ensure we know what is happening regionally and globally and this gives us great connection but their connections in country could be strengthened which will require greater resources”. Overall, the CRG Special Initiatives has been a critical avenue for civil society organisations to access technical assistance for a range of country dialogue processes. CRG support has resulted in greater knowledge and awareness among civil society of Global Fund processes. Another vital CRG initiative was funding the [Robert Carr Civil Society Networks Fund (RCNF)](https://www.globalfund.org/en/who-we-work-with/grantees/). Respondents highlighted that the RCNF made a real difference in enabling civil society consultation with communities. “We had funding from the RCNF and that is how we convened our own consultations. If we had not had this funding it would have been impossible. Other groups such as sex workers did not have the support and although we invited them to our consultations other women from key populations were invisible” ICW EA, Uganda.
Despite the positive feedback on the importance and usefulness of the CRG Special Initiatives, respondents raised the need for some changes. Respondents voiced that those requesting TA should be presented with options for TA providers including Providing Technical Assistance (TA) to include: 1) At minimum - options presented for those requesting the TA to select the organisation facilitating the TA that include areas of coverage; thematic; and geographical and community representation. 2) Ability to build capacity and solicit information with communities beyond the cities and document priorities 3) Provide resources to link and collate information from these sustained consultations which should follow the cycle from NSPs to prepare for country dialogues, monitoring implementation and 4) Provide sustained resources for national level review reflection processes. This would ensure deliberate outreach to all members of a constituency who requested the TA allowing smaller organisations to access these opportunities. 5) The TA provided by the Global Fund should extend beyond the grant making and include implementation. There is an assumption that technical support is available during the preparation stage for implementation – civil society and community Principal Recipient (PRs) face a challenge in obtaining technical support in preparing for implementation especially when it is the first time to implement.

3. **Continue to build knowledge and the understanding of gender transformative programming**

From interviews with women in Kenya, Uganda and Zimbabwe as well as from discussions as W4GF workshops, it is evident that there is much more to be done to create a better understanding of gender in the context of the three diseases. The Global Fund should continue efforts to ensure that all stakeholders – especially those in power have a clear understanding of gender transformative programming and intersections with human rights. Without this the Global Fund will fail to deliver its Strategic objective to “Promote and Protect Human Rights and Gender Equality” in the Global Fund 2017 – 2022 Strategy.

4. **Bolster support for women in all their diversity on CCMs and beyond**

The Global Fund should promote that countries (as a prerequisite to funding) allocate a percentage of the CCM budget directly for civil society engagement, so that civil society on CCMs can coordinate, consult, feedback, build consensus, as well as include communities in monitoring Global Fund activities. A third of allocated funds should be clearly earmarked for women and key populations most vulnerable to HIV, TB and Malaria. This budget should be located at the PR level and should be utilised through known, legitimate, credible and inclusive networks. “I always wonder how the Global Fund professes commitment to civil society engagement but fails to avail resource for these very critical processes. This should be rectified as a matter of urgency as our government conveniently would rather we remain incapacitated.” *W4GF advocate Zimbabwe.*

“To give you an example - The DREAMS programmes have partnered with local organisations. There is trust and a track record of working with communities who speak our language and have a presence here. They are accessible and understand us and we give them feedback. The CCM empowers big organisations to move into communities and disregard local players. This cannot be sustainable. Besides, why not just strengthen existing players than importing experts. This is a waste of time and resources because they spend too much time trying to gain entry when they could just utilise existing entry points.” *Sex worker from Zimbabwe.*

5. **Support capacity-building of women to monitor implementation**

Support civil society’s monitoring role through the development of common monitoring and evaluation tools such as community scorecards and shadow reports. Civil society can also conduct analyses of the effectiveness and impact of gender-transformative and human rights-based interventions and activities for key affected women and populations. These analyses can be used to inform Global Fund programmes, throughout the project cycle and substantiate needed adjustments along the way.
Monitoring, analyses and assessments by civil society should be funded by CCMs or other technical partners. This process could create opportunity for civil society to play a more robust oversight role; to demand accountability and transparency, critique strategies and processes i.e. biomedical responses, public health approaches, vs rights based programming in order to continuously examine and expose the shortfalls, gaps and opportunities for addressing the deepening inequities which fuel vulnerability and inequality.

6. Ensure that all CCMs consistently follow the CCM eligibility criteria
The Global Fund should consider conducting an assessment to rate government and CCM efforts and effectiveness in meaningfully engaging civil society. In addition, CCM eligibility requirements should be updated to outline the following:
- The financial and organisational/network requirements that must be in place to support meaningful communication structures between civil society CCM members and the communities they represent;
- A comprehensive introduction and orientation process/timeline for all new CCM members;
- Guidance to CCM civil society members on the creation of independent reference groups to support them on the CCM. An independent, properly resourced mechanism could create a support system for civil society CCM members and serve the purpose to coordinate stronger and more effective civil society engagement; and
- Provide technical support to aid the reference group.

7. Greater funds channelled for civil society implementation
A public health approach is often taken to address HIV amongst vulnerable groups, however, this does not effectively deal with generations of oppressions; gender inequality; violence and stigma and discrimination. The bulk of the Global Fund resources are currently channelled into a biomedical response, but where stigma and discrimination is rife, gender-based violence and negative stereotypes and attitudes become a barrier to accessing services. To address this the Global Fund must refocus and do a better job at funding community-based responses, community systems strengthening, and rights-based programming. “Civil society have seen a significant reduction in countries following the Dual Track Financing requirement but also reduction in countries having Sub Sub Recipients making it more challenging for community based organisations that work directly with women and girls to access funding and organisational capacity development opportunities that come with being a Global Fund implementer. Countries need to ensure the selection criteria for SRs does not act as a barrier towards qualification of local civil society.” W4GF advocate Uganda.

For more information, please contact Sophie Dilmitis, Global Coordinator, Women4GlobalFund (W4GF) – sophie@women4gf.org  www.women4gf.org  or  https://www.facebook.com/women4globalfund/  Women4GlobalFund (W4GF) is a dynamic and global platform of women and gender equality advocates who share a deep commitment to ensuring that Global Fund programmes are gender-transformative to meet the rights and specific needs of women and girls in all their diversity.

Annex N - Ethical Considerations in Data Collection

This Annex has been adapted from The North Jersey Health Collaborative Ethical Considerations in Data Collection (not dated).

If you would like additional information on ethical considerations please review the ICW Guidelines on ethical participatory research with HIV positive women and the 2016 WHO guide: Ethical and safety recommendations for intervention research on violence against women. Building on lessons from the WHO publication Putting women first: ethical and safety recommendations for research on domestic violence against women.

Collecting data is at the core of CBMF to improve good health outcomes. Sometimes, data collection seeks to better understand the barriers and challenges in service delivery and other times it is to review the quality of services and programmes and how they have improved people’s lives. Regardless of how data is collected (surveys, interviews, discussions or observations), all participants who engage in data collection must be fully informed about:

- the process and objectives;
- the manner in which the data is collected, stored and reported; and that
- none of the data and outcomes of its collection will intentionally pose harm.

The following ethical considerations are essential in data collection with community participants and should be strictly respected:

- Inform participants who you are (your name, organisation and reason for collecting data when requesting their participation).
- Do not engage in any activity that may cause physical or emotional harm to participants.
- Seek permission (in writing) from participants providing the data and make the following clear:
  - Involvement is voluntary.
  - Participants are free to withdraw from any data collection or intervention program at any point without pressure or fear of retaliation.
  - Make participants aware of any potential harm that could result from their participation.
- Participants must complete a consent form – see box for more on this as well as Annex O.
- Remain neutral. Do not let your personal preconceptions or opinions interfere with the data collection process.
- Collecting data (i.e. through surveys) is often done under the assumption that

`Consent Form: An easily understandable written document that documents a potential participant’s consent to be involved in research which describes the rights of an enrolled research participant. This form should communicate the following in a clear and respectful manner: research time-frame; title of research; researchers involved; purpose of research; description of research; potential harms and benefits; treatment alternatives; statement of confidentiality; information and data to be collected; how long the data will be kept, how it will be stored and who can access it; any conflicts of interest; a statement of the participant’s right to withdraw from participation at any point; and declarative statement of understanding that the potential participant agrees to and signs. The consent form should be in a language that the potential participant understands. For potential participants with limited literacy, the verbal communication of the consent document details should be provided along with proper documentation of consent, if it be given.” WHO 2011 Standards and Operational Guidance for Ethics Review of Health-Related Research with Human Participants`
information provided is confidential and the findings will be anonymous. Inform participants when you have to break confidentiality (e.g. in the case of harm to themselves or someone else) and whether results will be anonymous or not.

- When collecting data, try to avoid taking advantage of easy to access groups simply because they are there (this is called “convenience sampling”). Data should be collected from those that most help us answer our questions.
- Be respectful of people’s time and when possible, compensate them for it.
- Protect the data collected. Respect personal information and ensure this is only accessible to people who need to see the data. Keep the information in a secure, or locked location.
- After data are analysed share the results with participants and seek their validation. It is a good practice to ensure that women who provided the data are meaningfully engaged and are a part of each process - meaningfully shaping and leading the research.

To access more information on ethics visit the WHO 2011 Standards and Operational Guidance for Ethics Review of Health-Related Research with Human Participants.
Annex O - Informed Consent Sample Form (Title of the Study/Initiative)

This Informed Consent Sample Form has been adapted from the STOMATOLOGY EDU JOURNAL 2016.

Informed consent letters should keep language and vocabulary basic and straightforward. All sections of the consent form, except the "Consent" section, should be written in second person ("You are invited..."). Headers should include “Informed Consent” followed by the title of the study (e.g., the header in this document). Footers should include page numbers. If your consent letter is more than one page, the footer should also include a space for the participant’s initials (e.g., the footer in this document). The above information in italics is for your information and should be deleted from the actual consent form. Any text in brackets should be completed with relevant information.

Nb. you might want to add in the option of reading this out to the participant if s/he can’t read - and a thumbprint perhaps if s/he can’t write?

TITLE OF STUDY
[Insert title]

PRINCIPAL INVESTIGATOR
[Name]
[Department]
[Address]
[Phone]
[Email]

PURPOSE OF STUDY
You are being asked to take part in a research study. Before you decide to participate in this study, it is important that you understand why the research is being done and what it will involve. Please read the following information carefully. Please ask the researcher if there is anything that is not clear or if you need more information.
The purpose of this study is to [Briefly describe purpose of study.]

STUDY PROCEDURES
• List all procedures, preferably in chronological order, which will be employed in the study. Point out any procedures that are considered experimental. Clearly explain technical and medical terminology using non-technical language. Explain all procedures using language that is appropriate for the expected reading level of participants.
• State the amount of time required of participants per session, if applicable, and for the total duration of the study.
• If audio taping, videotaping, or film procedures are going to be used, provide information about the use of these products.

Participants Initials: ___________    Page 1 of 3
RISKS
List all reasonably foreseeable risks, if any, of each of the procedures to be used in the study, and any measures that will be used to minimize the risks.
You may decline to answer any or all questions and you may terminate your involvement at any time if you choose.

BENEFITS
List the benefits you anticipate will be achieved from this research. Include benefits to participants, others, or the body of knowledge. If there is no direct benefit to the participant, state so. For example, “There will be no direct benefit to you for your participation in this study. However, we hope that the information obtained from this study may....” When applicable, disclose alternative procedures or courses of treatment, if any, which might be advantageous to participants.

CONFIDENTIALITY
Your responses to this [survey] will be anonymous. Please do not write any identifying information on your [survey]. OR For the purposes of this research study, your comments will not be anonymous. Every effort will be made by the researcher to preserve your confidentiality including the following:
[State measures taken to ensure confidentiality, such as those listed below:
• Assigning code names/numbers for participants that will be used on all research notes and documents
• Keeping notes, interview transcriptions, and any other identifying participant information in a locked file cabinet in the personal possession of the researcher.]
Participant data will be kept confidential except in cases where the researcher is legally obligated to report specific incidents. These incidents include, but may not be limited to, incidents of abuse and suicide risk.

COMPENSATION
If there is no compensation, delete this section.
Indicate what participants will receive for their participation in this study. Indicate other ways participants can earn the same amount of credit or compensation. State whether participants will be eligible for compensation if they withdraw from the study prior to its completion. If compensation is pro-rated over the period of the participant’s involvement, indicate the points/stages at which compensation changes during the study.

CONTACT INFORMATION
If you have questions at any time about this study, or you experience adverse effects as the result of participating in this study, you may contact the researcher whose contact information is provided on the first page. If you have questions regarding your rights as a research participant, or if problems arise which you do not feel you can discuss with the Primary Investigator, please contact the Review Board in your country [Add In that information here]

VOLUNTARY PARTICIPATION
Your participation in this study is voluntary. It is up to you to decide whether or not to take part in this study. If you decide to take part in this study, you will be asked to sign a consent form. After you sign the consent form, you are still free to withdraw at any time and without giving a reason. Withdrawing from this study will not affect the relationship you have, if any, with the researcher. If you withdraw from the study before data collection is completed, your data will be returned to you or destroyed.

Participants Initials: ___________ Page 2 of 3
Note: Please delineate the "Consent" section of the Informed Consent Form by drawing a line across the page (like the one below this paragraph). This delineation is important because the consent form grammar shifts from second person to first person, as shown in this example.

CONSENT
I have read and I understand the provided information and have had the opportunity to ask questions and I have been provided with a written plain language statement to keep. I understand that my participation is voluntary and that I am free to withdraw at any time, without giving a reason and without cost. I acknowledge that the possible effects of participating in this research project have been explained to my satisfaction I understand that I will be given a copy of this consent form. I have been informed that the confidentiality of the information I provide will be safeguarded subject to any legal requirements; my data will be protected and accessible only by the named researchers.

I voluntarily agree to take part in this study.
